

VIDEOCASSETTE RECORDER

V0-5800PS

Revised-3

This manual includes the informations of Supplement-1, 2 and 3 that have been published already.

SONY[®]

SERVICE MANUAL

SPECIFICATIONS

GENERAL

Video recording:	Rotary two-head helical scan system
	Luminance: fm recording
	Color signal: converted subcarrier direct recording
Video signal system:	CCIR standards, PAL or SECAM color
Power requirements:	110 — 240 Vac $\pm 10\%$, 50/60 Hz $\pm 10\%$
Power consumption:	75 W with RM-440
Operating position:	Horizontal
Storage temperature:	-20°C to $+60^{\circ}\text{C}$ (-4°F to $+140^{\circ}\text{F}$)
Operating temperature:	5°C to 40°C (41°F to 104°F)
Dimensions:	Approx. 446 x 237 x 518 mm (w/h/d) (17-5/8 x 9-3/8 x 20-1/2 inches) including projecting parts and controls
Weight:	Approx. 24 kg (53 lb)

VIDEO

VIDEO IN:	BNC type x2 1.0 V (p-p) +1.0; -0.5 V (p-p), 75 ohms, unbalanced, sync negative
DUB IN:	7 pin, x1
TV:	8 pin, x1
VIDEO OUT:	BNC type, x1 1.0 V (p-p) ± 0.2 V (p-p), 75 ohms, unbalanced, sync negative
DUB OUT:	7 pin, x1
TV:	8 pin, x1
Horizontal resolution:	Monochrome mode: 340 lines Color mode: 250 lines
Signal-to-noise ratio:	Monochrome mode: more than 48 dB Color mode: more than 46 dB
Subcarrier	
SC IN:	BNC type, x1 2 V (0.5 — 3 V) (p-p), 75 ohms, unbalanced, sync negative
Recording level:	Automatic

AUDIO

LINE CH-1, CH-2 IN:	Phono jack, x 1 in each -10 dB, 47 Kohms
MIC CH-1, CH-2:	Phone jack, x 1 in each -60 dB, for 600 ohm microphones
TV:	8 pin, x1
LINE CH-1, CH-2 OUT:	Phono jack, x 1 in each -5 dB (with 47 Kohm load)
AUDIO MONITOR:	Minijack, x 1 -5 dB (with 47 Kohm load)
HEADPHONES:	Stereo phone jack, x1 for 8 ohm headphones Level: adjustable (-24 dB to -46 dB)
TV:	8 pin, x1
Signal-to-noise ratio:	Better than 48 dB (at 3% distortion) Both channels 1 and 2
Frequency response:	50 — 15,000 Hz (channels 1 and 2)
Recording level adjustment:	Manual, with audio limiter

TAPE TRANSPORT

Tape speed:	9.53 cm/sec (3-3/4 ips)
Recording or playback time:	60 min (with KCA-60)
Fast forward and rewind time:	within 4 min (with KCA-60)
Wow and flutter:	$\pm 0.25\%$ (DIN)
Tape compatibility:	U-matic video cassette tape
Usable tape:	KCA, KCS type tape

SPECIAL FUNCTIONS

Pause:	A still picture is obtained, with long pause function
Search:	Possible (still, and 1/30 to 5 times of normal speed in forward and reverse directions) Picture search is possible with the RM-440 when the KCS type tape is used.
Tracking control:	Possible
Skew control:	Possible
Sync system:	Internal and external
Vertical-interval switcher:	Internal
Dropout compensator:	Internal
Overlap of recording using the PAUSE button:	1 ± 1 frame
Programmed operation:	Possible (The memory will be kept for three days.)

ACCESSORIES SUPPLIED

AC power cord (1)

RECOMMENDED VIDEO EQUIPMENT AND ACCESSORIES

Editing Control Unit RM-440
Color Video Monitor Sony CVM and PVM series
Color Video Camera Sony DXC series
Auto Search Control RX-353CE, RX-303CE
Remote Control Unit RM-500, RM-580
Cleaning Cassette KC-1C
Remote Control Cable RCC-5F
Dubbing Cable VDC-5 (5 m)
Monitor Connecting Cable VMC-3P (3 m), VMC-5P (5 m), VMC-10P (10 m)
Video Responder System VRC-100, VRS-110, VRD-100, VRP-100
RF kit RFK-660UCE/660UB/660UF/660CH
Multi Remote Control Unit RM-555
Video and Audio Signal Distributor DA-500
Video and Audio Switcher VCS-500
VTR Selector RM-V5

TABLE OF CONTENTS

1. GENERAL DESCRIPTION

1-1.	Features	1-1
1-2.	Note on Videocassette Tape	1-1
1-3.	Location and Function of Controls	1-2
1-4.	Connections and Select SW Setting	1-4
1-5.	Time Base Corrector	1-7
1-6.	Search Operation	1-7
1-7.	Dub Audio	1-7
1-8.	Automatic Editing	1-8
1-9.	Smooth Transition Between Scene	1-9
1-10.	Auto Search Control	1-9
1-11.	Timer Operation	1-10
1-12.	To See a Picture on a TV Receiver	1-11
1-13.	Programmed Operation	1-12

2. SERVICE INFORMATION

2-1.	Disassembly of Cabinet	2-1
2-2.	Cassette-Up Compartment Removal and Installing Procedures	2-2
2-3.	Main Parts Location	2-3
2-3-1.	Location of the Printed Circuit Boards	2-3
2-3-2.	Location of the Mechanical Main Parts/Components	2-5
2-4.	Spare Parts	2-7
2-5.	Machine Position for Repair Work	2-7
2-6.	Cassette Removal Procedure when Normal Ejection is not Possible	2-7
2-7.	To Operate the Machine without Installing Cassette Tape	2-8
2-8.	To Set Up 10 Times Picture Search Mode without RM-440	2-8
2-9.	Tape Slack Detector	2-8
2-10.	STOP (E-to-E) MODE	2-8
2-11.	Fixture	2-9
2-12.	Printed Circuit Board	2-9
2-13.	Cassette-Up Compartment Operation	2-10
2-14.	Tape Tension Control Mechanism	2-11
2-15.	Timing of Switch, Motor and Solenoid	2-12

3. PERIODIC CHECK AND MAINTENANCE

3-1.	Maintenance After Repairs	3-1
3-2.	Periodic Check	3-1
3-3.	Hours Meter	3-1
3-4.	Others	3-1

4. REPLACEMENT OF MAJOR PARTS

4-1.	Replacement of Upper Drum Assembly	4-1
4-2.	Replacement of Drum Assembly	4-2
4-3.	Replacement of Capstan Motor	4-3
4-4.	Replacement of CTL PB Head	4-3
4-5.	Replacement of S Drawer Roller	4-4
4-6.	Replacement/Adjustment of Tape Guides on Threading Ring	4-5
4-7.	Adjustment Item Table After Main Parts Replacement	4-6

5. LINK AND DRIVE SYSTEM ALIGNMENT

5-1.	Reel Table System Adjustment	5-1
5-1-1.	Cassette Holder Position Adjustment	5-1

5-1-2.	Reel Table Height and Vertical Play Adjustment	5-1
5-2.	T Drawer Arm Adjustment	5-3
5-2-1.	T Drawer Arm EJECT Position Adjustment	5-3
5-2-2.	Unthread-end Switch Position Adjustment	5-3
5-3.	Threading System Adjustment	5-4
5-3-1.	Threading Ring Rotation Adjustment	5-4
5-3-2.	Gear Box Position Adjustment	5-5
5-3-3.	Pinch Roller Self-Alignment Adjustment	5-6
5-3-4.	FR Detector Block Mounting Position Adjustment	5-7
5-4.	Pinch Lever Block Adjustment	5-8
5-4-1.	Pinch Lever Pre-set Adjustment	5-8
5-4-2.	Pinch Roller Pre-set Adjustment	5-9
5-4-3.	Pinch Solenoid Block Position Adjustment	5-10
5-5.	T Tape Sensor Position Adjustment	5-11
5-6.	Tension Arm System Adjustment	5-12
5-6-1.	S Drawer Roller Ass'y Limiter Adjustment	5-12
5-6-2.	T Tension Regulator Operating Position Adjustment	5-12
5-6-3.	S Tension Regulator Operating Position Adjustment	5-13
5-6-4.	Tension Detector Position Adjustment	5-14
5-7.	10 Times Picture Search Operating Position Adjustment	5-14
5-8.	Solenoid System Adjustment	5-16
5-8-1.	Search Solenoid Mounting Position Adjustment	5-16
5-8-2.	Skew Solenoid Mounting Position Adjustment	5-17
5-8-3.	T Idler Solenoid Position Adjustment	5-18
5-8-4.	S Idler Solenoid Position Adjustment	5-19
5-8-5.	Pinch Solenoid Mounting Position Adjustment	5-20
5-8-6.	10 Times Picture Search Solenoid Mounting Position Adjustment	5-20
5-8-7.	T Brake Solenoid Position Adjustment	5-21
5-8-8.	S Brake Solenoid Position Adjustment	5-22
5-9.	Cassette-up Compartment Adjustment	5-22
5-9-1.	Cassette-in Switch Position Adjustment	5-22
5-9-2.	Cassette-down Switch Position Adjustment	5-23
5-10.	Leaf Spring Position Adjustment	5-24
5-11.	Pinch Lever Right Angle Adjustment	5-25

6. BACK TENSION AND TORQUE ALIGNMENT

6-1.	Brake System Adjustment	6-1
6-1-1.	S Brake Torque Adjustment	6-1
6-1-2.	T Brake Torque Adjustment	6-2
6-1-3.	REW Brake Torque Adjustment	6-3
6-2.	FF/REW Torque Adjustment	6-3
6-3.	FWD Torque Adjustment	6-4
6-4.	REV Torque Adjustment	6-5
6-5.	FF Back Tension Adjustment	6-6
6-6.	FWD Back Tension Adjustment	6-7

7. TAPE RUN ALIGNMENT

7-1.	FF/REW Modes Tape Path Adjustment	7-1
7-2.	T Correction Guide Slantness Adjustment	7-2
7-3.	FWD Mode Tape Path Adjustment (1)	7-2
7-4.	FWD Mode Tape Path Adjustment (2)	7-3
7-5.	REV Mode Tape Path Adjustment	7-3
7-6.	Tape Path Adjustment Around Pinch Roller	7-4

7-6-1.	Tape Wrinkle Remove Adjustment	7-4
7-6-2.	Pinch Roller Slantness Adjustment	7-4
7-7.	10 Times Picture Search • Tape Path Adjustment	7-5
7-8.	Tracking Adjustment	7-6
7-8-1.	Video Tracking Adjustment	7-6
7-8-2.	CTL PB Head Height/Azimuth/Zenith Adjustment	7-10
7-8-3.	Audio Head Height Adjustment	7-12
7-8-4.	Audio Head Zenith Adjustment	7-12
7-8-5.	Audio Head Azimuth Adjustment	7-13
7-8-6.	Audio Head Phase Adjustment	7-14
7-8-7.	Audio/CTL Head Position Adjustment	7-15
7-9.	Video Head Dihedral Adjustment	7-16

8. POWER SUPPLY AND SYSTEM CONTROL ALIGNMENT

8-1.	Reg +12 V Adjustment (Switching Regulator)	8-1
8-2.	Reg +9 V Adjustment	8-2
8-3.	Digital VCC +5 V Adjustment for Servo	8-2
8-4.	Reg +5 V Adjustment for System Control	8-4
8-5.	Tape Sensor Balance Adjustment	8-4

9. SERVO SYSTEM ALIGNMENT

9-1.	Audio/CTL Head Position Adjustment	9-3
9-2.	Tracking Multi Adjustment	9-4
9-3.	Capstan Free Speed Adjustment	9-4
9-4.	Capstan STOP Servo Adjustment	9-5
9-5.	Capstan SEARCH x1 Speed Adjustment	9-5
9-6.	Capstan SEARCH x1/30 Speed Adjustment	9-5
9-7.	Capstan SEARCH x1/15 Speed Adjustment	9-6
9-8.	Capstan SEARCH x1/2 Speed Adjustment	9-6
9-9.	Capstan FWD/REV Detector Adjustment	9-6
9-10.	Drum AFC Bias Adjustment	9-7
9-11.	Drum AFC Transient Adjustment	9-7
9-12.	Drum Lock Phase Adjustment	9-8
9-13.	ϕ^2 Phase Adjustment	9-8
9-14.	Switching Position Adjustment	9-9
9-15.	Picture Splitting Compensator Adjustment	9-9
9-16.	Reel Servo Adjustment	9-10
9-16-1.	x10 Picture Search Speed Adjustment	9-10
9-16-2.	Still Speed Adjustment	9-11

10. AUDIO SYSTEM ALIGNMENT

10-1.	PB Output Frequency Response Adjustment	10-4
10-2.	Audio Level Control Setting/Meter Calibration Adjustment	10-4
10-3.	PB Output Level Adjustment	10-4
10-4.	Audio Bias/Erase Frequency Adjustment	10-5
10-5.	Audio Bias Current Adjustment	10-5
10-6.	Bias Trap Adjustment (REC-1)	10-5
10-7.	Bias Trap Adjustment (REC-2)	10-6
10-8.	Audio Limiter Gain Adjustment	10-6
10-9.	REC Level Adjustment	10-6
10-10.	INSERT Bias Frequency Adjustment	10-7
10-11.	PB Bias Trap Adjustment	10-7
10-12.	Cross-Talk Cancel Adjustment	10-7

11. VIDEO SYSTEM ALIGNMENT

11-1.	Playback RF Amplifier Adjustment	11-4
11-1-1.	PB RF Frequency Response Adjustment	11-4
11-1-2.	PB Y-RF Output Balance Adjustment	11-5
11-1-3.	PB Y-RF Output Level Adjustment	11-6

11-1-4.	PB Chroma-RF Output Balance Adjustment	11-6
11-1-5.	PB Chroma-RF Output Level Adjustment	11-7
11-2.	Y Amplifier Adjustment	11-7
11-2-1.	Noise Canceller Adjustment	11-7
11-2-2.	Drop-Out Sensitivity Level Adjustment	11-8
11-2-3.	RF-Band Noise Adjustment	11-8
11-2-4.	Carrier Balance Adjustment	11-9
11-2-5.	Y Output Level Adjustment	11-9
11-2-6.	SYNC Tip Carrier Frequency Adjustment	11-10
11-2-7.	FM Deviation Adjustment	11-10
11-2-8.	White Clip Adjustment	11-11
11-2-9.	PB Y Phase Equalizer Adjustment	11-11
11-2-10.	REC Color Y Phase Equalizer Adjustment	11-12
11-3.	Chroma Amplifier Adjustment	11-12
11-3-1.	DUB Audio Bias Trap Adjustment	11-12
11-3-2.	4.43 MHz Reference Oscillator Frequency Adjustment	11-13
11-3-3.	APC 5.12 MHz Tuning Adjustment	11-13
11-3-4.	Chroma Converter Balance Adjustment	11-13
11-3-5.	ACC Burst Tuning Adjustment	11-14
11-3-6.	ACC Level Adjustment	11-14
11-3-7.	VCO Center Frequency Level Adjustment	11-14
11-3-8.	APC Gain Adjustment	11-15
11-3-9.	REC Chroma Frequency Response Adjustment	11-15
11-3-10.	Chroma Mix Level Adjustment	11-16
11-3-11.	Differential Gain Adjustment	11-16
11-4.	Record Amplifier Adjustment	11-17
11-4-1.	Y-REC Current Frequency Response Adjustment	11-17
11-4-2.	Y-REC Current Level Adjustment	11-18
11-4-3.	Chroma-REC Current Level Adjustment	11-18
11-5.	DUB Chroma Adjustment	11-19
11-5-1.	DUB Chroma Output Level Adjustment (REC/EE)	11-19
11-5-2.	Chroma REC Current Adjustment	11-19
11-5-3.	DUB Chroma Output Level Adjustment (PB/DUB)	11-20
11-6.	Y/Chroma Delay Time Adjustment	11-21
11-6-1.	PB Y/C Delay Time Adjustment	11-21
11-6-2.	REC Y/C Delay Time Adjustment	11-22

SECTION 1

GENERAL DESCRIPTION

1-1. FEATURES

Automatic editing system: Together with a VO-5850P/VO-5850S Videocassette Recorder and a RM-440 Automatic Editing Control Unit, the VO-5800PS can compose an automatic editing system.

Smooth transition between scenes: The signal from another videocassette recorder or a video camera can be edited by using the PAUSE button, which assures a smooth transition between scenes. It is also possible to assemble two video signals by switching the VIDEO-1/VIDEO-2 select switch.

Search operation: Governed by the search dial, playback at 1/30 to 5 times normal speed is possible in both forward and reverse directions. When a KCS cassette is used, picture search (at about 10 times normal playback speed) is also possible with the search dial on the optional remote control unit.

Dubbing connectors: Connectors for editing or duplicating video signals are included.

LED time counter: The time counter reads the CTL signals recorded on the tape and the LEDs indicate the point on the tape in seconds and minutes.

Automatic transport operation: The PROGRAMMED OPERATION selector allows you to locate a particular point on the tape easily and quickly and also to play back a portion on the tape repeatedly.

Still picture: When the tape is stopped with the PAUSE button during playback, a still picture can be obtained. The guard band noise is limited to the upper or lower part of the screen so that the still picture is easy to see.

Long pause mode: When the tape is stopped in the pause mode for a long period of time, the machine automatically enters the long pause mode to avoid possible damage to the tape.

Moisture detector: When moisture condenses on the video head drum, the moisture detector is activated and the machine stops to avoid possible tape damage. The AUTO OFF indicator lights to indicate moisture condensation.

Remote control and auto search: The machine can be remotely controlled with an optional remote control unit. Any point on the tape can be searched for and played back automatically using an RX-353CE or RX-303CE Auto Search Control Unit.

Connectors for time base corrector: The best possible playback picture can be obtained when a time base corrector (optional) is connected.

Logic control: The logic control system allows you to change modes without pressing the STOP button.

Full automatic rewind: The tape is automatically rewound to the beginning when it runs to the end.

Automatic control of video recording level: The automatic gain control circuit maintains the proper video level, assuring optimum video recording.

Limiter function: The audio recording level is adjusted manually. The limiter circuit minimizes audio distortion at the program peaks.

Two audio tracks: Two audio tracks permits recording and playback of stereo sound or bilingual program material.

Audio dubbing: Audio (commentary, music, etc.) may be added to video recording made earlier.

Timer operation: With the aid of a timer (optional), recording and playback can be started and stopped when the recorder is unattended.

Stable playback picture: The servo system using a direct drive capstan motor and drum motor, and the newly developed digital servo IC assure a stable tape transport which reduces tape jitter.

No power adaptation and low power consumption: Thanks to Sony's newly-developed high efficiency switching regulator, the unit can be operated with a wide range of power voltages and frequencies without power adaptation. Power consumption is low.

1-2. NOTE ON VIDEOCASSETTE TAPE

The video and audio signals are recorded using the full width of the tape as shown below. Because of this, the tape cannot be recorded in the reverse direction.

If you want to safeguard the material recorded on a cassette, remove the red button on the bottom so it cannot be recorded even if the REC button is pressed. Accidental erasure is now impossible. If you later decide to record on this cassette, replace the button. If a cassette without a red button is inserted into the videocassette recorder, the E-to-E mode picture does not appear on the monitor screen.

1-3. LOCATION AND FUNCTION OF CONTROLS

FRONT PANEL

To put the Operation panel on a slant

The lower half of the operation panel can be pulled out as shown below.

To put the panel on a slant
While pulling the projections on the bottom of the operation panel out, swing the bottom of the panel out and up until the side braces lock.

To return the panel to the original position
Push up on the side braces to unlock them and swing the panel down and back until it clicks into place.

REAR PANEL

1-4. CONNECTIONS AND SELECT SW SETTING

RF OUT connector

The output signal of the RF modulator, if it is inserted, is fed out here. Using this connector, you can see a picture on a conventional TV receiver.

RF modulator compartment

Insert an RF modulator* (optional) here to see a picture on a conventional TV receiver.

* An RF (Radio Frequency) modulator converts the signal to be fed to the TV receiver into a UHF channel signal.

VIDEO IN 1 and 2 connectors (BNC type)

Connect the video signal to be recorded to these connectors.

DUB IN connector (7 pin)

When duplicating a tape using a player with a dubbing connector, the video signal is connected using this connector.

Note on DUB connectors

Do not connect the dubbing connectors in parallel.

TBC switch

Usually set to OFF.

When the time base corrector (optional) is used, set this switch to ON.

SC IN (subcarrier input) connector (BNC type)
Connect the subcarrier from the time base corrector here.

LINE IN (audio line input) jacks (phono type)
Connect the audio signal to be recorded here.

AUDIO MONITOR jack (mini type)
Connect to the audio input jack on the video monitor. The signal selected by the AUDIO MONITOR switch on the front panel is output here.

LINE OUT (audio line output) jacks (phono type)
The signals recorded on the audio channel 1 and audio channel 2 are output here.

AC IN connector
Connect the supplied ac power cord here.

REMOTE connector (33-pin)
Connect an optional editing control unit, auto search control unit or remote control unit to this connector.

● Before connecting the remote control cable, check whether the connector is male or female.

● The REMOTE connector accepts a 20-pin connector. A plug adaptor is unnecessary.

To disconnect the cable, press the white button on the connector and pull the connector out.

MONITOR TV selector

Set this selector according to the type of video monitor used.

COLOR: For a color monitor.

B & W: For a black and white monitor.

SYSTEM SELECT switch

Set this selector according to the video signal system adopted in your area.

PAL: For the PAL color system

SECAM: For the SECAM color system

TV connector (8-pin)

Connect to the 8-pin VTR connector of a video monitor.

The video and audio input and output connections can be made with a single cable. When this connector is used, the audio signal will be recorded on audio channel 2. The channel selected by the AUDIO MONITOR switch will be heard through the speaker on the video monitor.

Be sure that the connectors are properly aligned before connecting the cable.

To remove, press the buttons on both sides of the connector.

DUB OUT connector (7-pin)

When duplicating a tape using a recorder with a dubbing connector, the video signal is connected using this connector.

VIDEO OUT connector (BNC type)

The video signal is output here.

COLOR LOCK switch

As a rule, set to NORMAL. If the playback picture has no color or if the hue is abnormal, set the switch to the upper or lower position marked [•].

RX DATA jack (mini type)

For recording the data and reading the data recorded on the tape by the RX-353CE.

1-5. TIME BASE CORRECTOR

The best possible playback picture can be obtained when a time base corrector is used. Connect the time base corrector as illustrated below, and set the TBC switch to ON.

● For details on the operation of the time base corrector, refer to the instruction manual furnished with it.

1-6. SEARCH OPERATION

A particular point can be quickly located with the search dial.

Press the SEARCH button and turn the search dial to look for the point you want to locate. The search dial allows you to vary the playback speed from $\frac{1}{30}$ to 5 times the normal playback speed in both directions. Set the search dial to the center "0" position at the point. The tape stops and a still picture can be seen on the monitor.

Notes

- During search operation, the servo system is not locked, so guard band noise flows on the playback picture.
- When the video signal is connected using the DUB connectors, the E-to-E mode picture on the monitor connected to the recorder may roll vertically when the player is in the pause or search mode.
- When the video signal is connected using the VIDEO connectors, the color of the E-to-E mode picture on the monitor connected to the recorder may be lost when the player is in the search mode. If this happens, set the COLOR LOCK switch to either upper or lower position.
- If the TBC switch is set to ON but a time base corrector is not connected, the vertical sync does not lock in the search mode and the picture rolls vertically.

1-7. DUB AUDIO

You can add a sound such as music or commentary on the tape on which the video signal has already been recorded. The new sound is recorded on the audio channel 1, and when the new sound is recorded, the previous sound will be erased.

Operation

1. Turn the power on.
2. Insert a recorded video cassette.
3. Press the DUB/CH-1 button.
4. Adjust the audio recording level.
5. Press the DUB/CH-1 and PLAY buttons simultaneously. The recorder enters the audio dubbing mode.

To stop dubbing, press the STOP button.

● If both a microphone and another audio source are connected simultaneously, only the sound from the microphone will be recorded.

● When a microphone is used, avoid pointing the microphone at the monitor or turn the sound volume on the monitor down, to prevent acoustic feedback (a whistle-like sound).

To record sound on the middle of the tape

Play the tape to the point at which sound is to be added and press the PAUSE button to stop the tape momentarily. Press the DUB/CH-1 button, then the PAUSE button again. The recorder will enter the audio dubbing mode.

1-8. AUTOMATIC EDITING

When the RM-440 Automatic Editing Control Unit and the VO-5850P/VO-5850S are used with the VO-5800PS, accurate and automatic tape-to-tape editing is possible. Once the edit-in and edit-out points have been memorized on the RM-440, the editing can be done simply by pressing the AUTO EDIT button.

Almost all functions of the RM-440 can be activated when the RM-440 is used with the VO-5800PS. However, picture search is possible only when a KCS cassette is used.

● During picture search, the picture may become monochrome or roll vertically on some monitors. If this happens, release the picture search mode by turning the search dial.

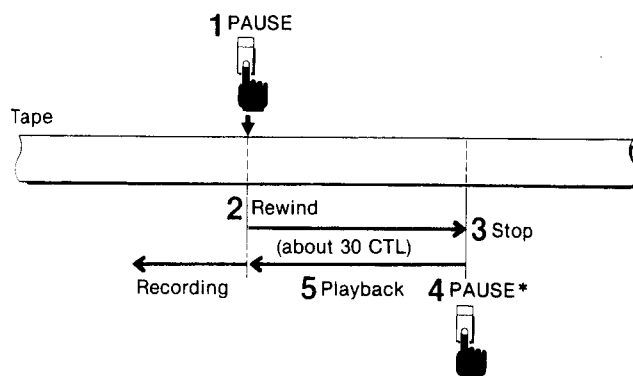

CONNECTIONS

1-9. SMOOTH TRANSITION BETWEEN SCENE

Using the PAUSE button, you can smoothly add the scenes one after another.

Press the PAUSE button at the end of a scene, and the tape automatically rewinds about 1 second's worth of tape and stops (pause mode). The E-to-E mode picture remains on the monitor screen, but not recorded. To start recording the next scene, press the PAUSE button again. The tape runs in the playback mode to the point where the PAUSE button has been pressed to stop the tape, and the recorder enters the record mode. Thus the scenes can be continued smoothly.

Note

Do not disconnect the program source when the tape is in the pause mode or the scenes may not be smoothly continued.

The long pause mode

If the pause mode continues for about 8 minutes, the tape around the head drum automatically slackens to protect the video head and the tape.

This is called the long pause mode.

1-10. AUTO SEARCH CONTROL

The RX-353CE divides the recorded material into segments. A segment has its own number and the beginning and end position on the tape, and we call them the segment data. The segment data can be recorded at the beginning of the audio channel 1 on the tape, and be kept even if the RX-353CE is disconnected or the power of the recorder is turned off. So the data can be used repeatedly.

Notes

- The data recording level is automatically adjusted. So the level adjustment is not necessary.
- Do not run the tape with the function buttons or search dial on the VO-5800PS when the RX-353CE is used. This is because the indication on the tape position indicator of the RX-353CE and the actual tape position do not correspond correctly when the VO-5800PS is used to run the tape.

1-11. TIMER OPERATION

Using an optional timer, you can start and stop recording and playback while the recorder is unattended.

TIMER RECORDING

1. Turn the recorder on and make preparations for recording.
2. Set the time to start and stop recording on the timer.
3. Set the TIMER switch to REC.

The recording will begin at the time set on the timer.

- When the TIMER switch is set to REC, the function buttons other than the STOP button cannot function. Also the STOP button cannot also function during the tape being threaded just after the power is turned on.
- When the timer recording is finished, be sure to set the TIMER switch to OFF. If the POWER switch is set to ON with the TIMER switch remained to REC, the recording will automatically begin and the recorded material will be erased.

TIMER PLAYBACK

1. Turn the recorder on and make the preparations for playback.
2. Set the time to start and stop playback on the timer.
3. Set the TIMER switch to PLAY.

The playback will begin at the time set on the timer.

1-12. TO SEE A PICTURE ON A TV RECEIVER

A playback picture can be seen on a conventional TV receiver when an RF modulator (optional) is installed into the VO-5800PS. It is, of course, possible to see a TV program as usual.

CONNECTIONS

INSTALLATION OF AN RF MODULATOR

1. Loosen the screw on the RF modulator compartment, and remove the lid.

2. Install the RF modulator into the compartment aligning the direction properly.

3. Replace the lid.

- Push to break off the hole and the channel adjusting screw can be reset without removing the RF modulator compartment lid.
- For details, please refer to the instruction manual furnished with the RF kit.

OPERATION

1. Set the ANT/VTR selector on the antenna selector to VTR.
2. Turn the TV receiver on, and set the channel to the output channel of the RF modulator.
3. Turn the recorder on.
4. Insert a recorded video cassette.
5. Set the AUDIO MONITOR switch to the appropriate position.
6. Press the PLAY button. You can see a playback picture on a TV receiver.

1-13. PROGRAMMED OPERATION

Using the MARK IN A and B buttons and the PROGRAMMED OPERATION switch, you can locate a particular point quickly or play a particular part repeatedly.

- You can memorize only one point on each MARK IN A or B button. If the button is pressed several times, only the last point will be memorized.
- The memory of the MARK IN A and B buttons are cancelled when the RESET button is pressed and the "00 00" will be memorized on both buttons.
- The PROGRAMMED OPERATION switch should be set to the OFF or \star position when you memorize the point on the MARK IN A or B button.

To locate a particular point

1. Press the MARK IN A button at the desired point.
2. Set the PROGRAMMED OPERATION switch to \star .
3. Run the tape in the rewind or search mode. The tape will stop at the point where the MARK IN A button was pressed.
- When the tape runs in the search mode, a still picture can be seen when the tape stops.

To repeat a particular part

1. Search for a point from where the playback is to begin and press the MARK IN A button to memorize the point.
2. Search for a point where the playback is to stop and press the MARK IN B button to memorize the point.
3. Set the PROGRAMMED OPERATION switch to $\text{A} \rightarrow \text{B}$.
4. Press the REW button and the part between the points memorized on the MARK IN A and B buttons are played back repeatedly.

To stop the playback, press the STOP button.

- The video signal or the CTL signal should be recorded for more than 5 seconds after the point which is memorized on the MARK IN B button.

To repeat between the beginning of the tape and a particular point

1. Search for a point where the playback is to stop and memorize the point on the MARK IN B button.
2. Play the tape for more than 10 seconds, stop the tape and press the MARK IN A button.
3. Press the REW button.
4. Set the PROGRAMMED OPERATION switch to $\text{A} \rightarrow \text{B}$. The tape rewinds to the beginning of the tape, then the recorder plays back the designated portion on the tape repeatedly.

To stop the playback, press the STOP button.

To repeat between a particular point and the end of the tape

1. Search for a point from where the playback is to begin and press the MARK IN A button.
2. Rewind the tape more than 10 seconds by watching the time counter, stop the tape and press the MARK IN B button.
3. Play the tape.
4. Set the PROGRAMMED OPERATION switch to $\text{A} \rightarrow \text{B}$. The tape is played back to the end and rewinds to the point where the MARK IN A button was pressed, and the playback of the designated portion on the tape is repeated.

To stop the playback, press the STOP button.

To check the memory on the MARK IN button.

1. Press the STOP button.
2. Set the PROGRAMMED OPERATION switch to $\text{A} \rightarrow \text{B}$.
3. Press the MARK IN A or B button, and the memory on that button will be displayed on the time counter.

Memory on the MARK IN A and B buttons

The memory on the MARK IN A and B buttons and the display on the time counter will be kept for three days even if the power is turned off.

2-2. CASSETTE-UP COMPARTMENT REMOVAL AND INSTALLING PROCEDURES

- (1) Remove the upper panel and right side ornamental panel.
- (2) Disconnect the connector of cassette-up compartment.
- (3) Disconnect the harness from the stay.
- (4) Loosen the fixing screw of the right-end of stay.
- (5) Remove the stay from boss of side panel.
- (6) Remove the cassette-up compartment.

Reverse the removal procedure for installing the cassette-up compartment.

Remove the two fixing screws and move the rear panel in the arrow direction.

Remove the function control panel on a slant. Remove the AUDIO and TRACKING knobs and five fixing screws, and remove the level control panel.

< BOTTOM VIEW >

- ②③ PT-9 BOARD

- ②⑤ Take-up idler solenoid
- ②⑥ 10 times picture search solenoid
- ②⑦ Take-up brake solenoid

- (8) Raise the cam for opening the lid and close the cassette tape lid.

- (9) Remove the tape from the cassette compartment.
- (10) Turn the gear on the right side of the cassette compartment counterclockwise direction by hand in order to place the cassette compartment into the up state.
- (11) Locate the cause of the trouble and remedy the problem.

2-7. TO OPERATE THE MACHINE WITHOUT INSTALLING CASSETTE TAPE

- (1) Remove the cassette-up compartment referring to sec. 2-2. (Tape beginning sensor and tape end sensor are disabled according to disconnect the connector of cassette-up compartment.)
- (2) Turn off the POWER. (The machine is put into the FR-STOP mode automatically.)
- (3) The machine can be placed into the desired mode by pressing the function button to corresponding to the mode.

2-8. TO SET UP 10 TIMES PICTURE SEARCH MODE WITHOUT RM-440

- Search picture at 1/30 to 5 times normal speed can be obtained in both forward and reverse directions by the SEARCH dial on the function control panel. When the KCS cassette is inserted into VTR and the RM-440 is connected to VTR, 10 times picture search is also obtained with the SEARCH dial on the RM-440.

- If RM-440 is not available, 10 times picture search mode is set up as the following procedures.

- (1) Unsolder the jumper solder between IC136 pin 4 and IC33 pin 6 on SY-68C board.
- (2) Temporarily connect 10 k Ω resistor between IC136 pin 4 and IC33 pin 6 on SY-68C board.
- (3) Short between IC33 pin 6 and E8 on SY-68C board with jumper lead.
- (4) Unsolder the jumper solder between IC134 pin 3 and IC32 pin 4 on SY-68C board.
- (5) Temporarily connect 10 k Ω resistor between IC134 pin 3 and IC32 pin 4 on SY-68C board.
- (6) Short between IC32 pin 4 and E8 on SY-68C board with jumper lead.
- (7) Short between CN32 pin 11 and E8 on SY-68C board with jumper lead.
- (8) FWD direction picture search
Short between CN22 pin 5 and +5 V with jumper lead.
REV direction picture search
Short between CN22 pin 5 and E8 with jumper lead.

After check and/or adjustment is performed, the reset circuit is made to original.

2-9. TAPE SLACK DETECTOR

If the tape is not taken up and tape slack is occurred in the machine, these conditions are detected with the reel rotation detector under the reel table. The reel rotation detector is composed with the slit of the reel table and the photointerrupter. If the reel table is stopped its rotation more than the listed time in FWD, REV and unthreading modes, the reel rotation detector circuit detect as the tape slacks in the machine, and generates the auto stop signal.

Mode	Time
$\times 1$ speed ~	0.3 sec.
$\times 1/10 \sim \times 1$ speed	1.6 sec.
$\sim 1/10$ speed	9.6 sec.

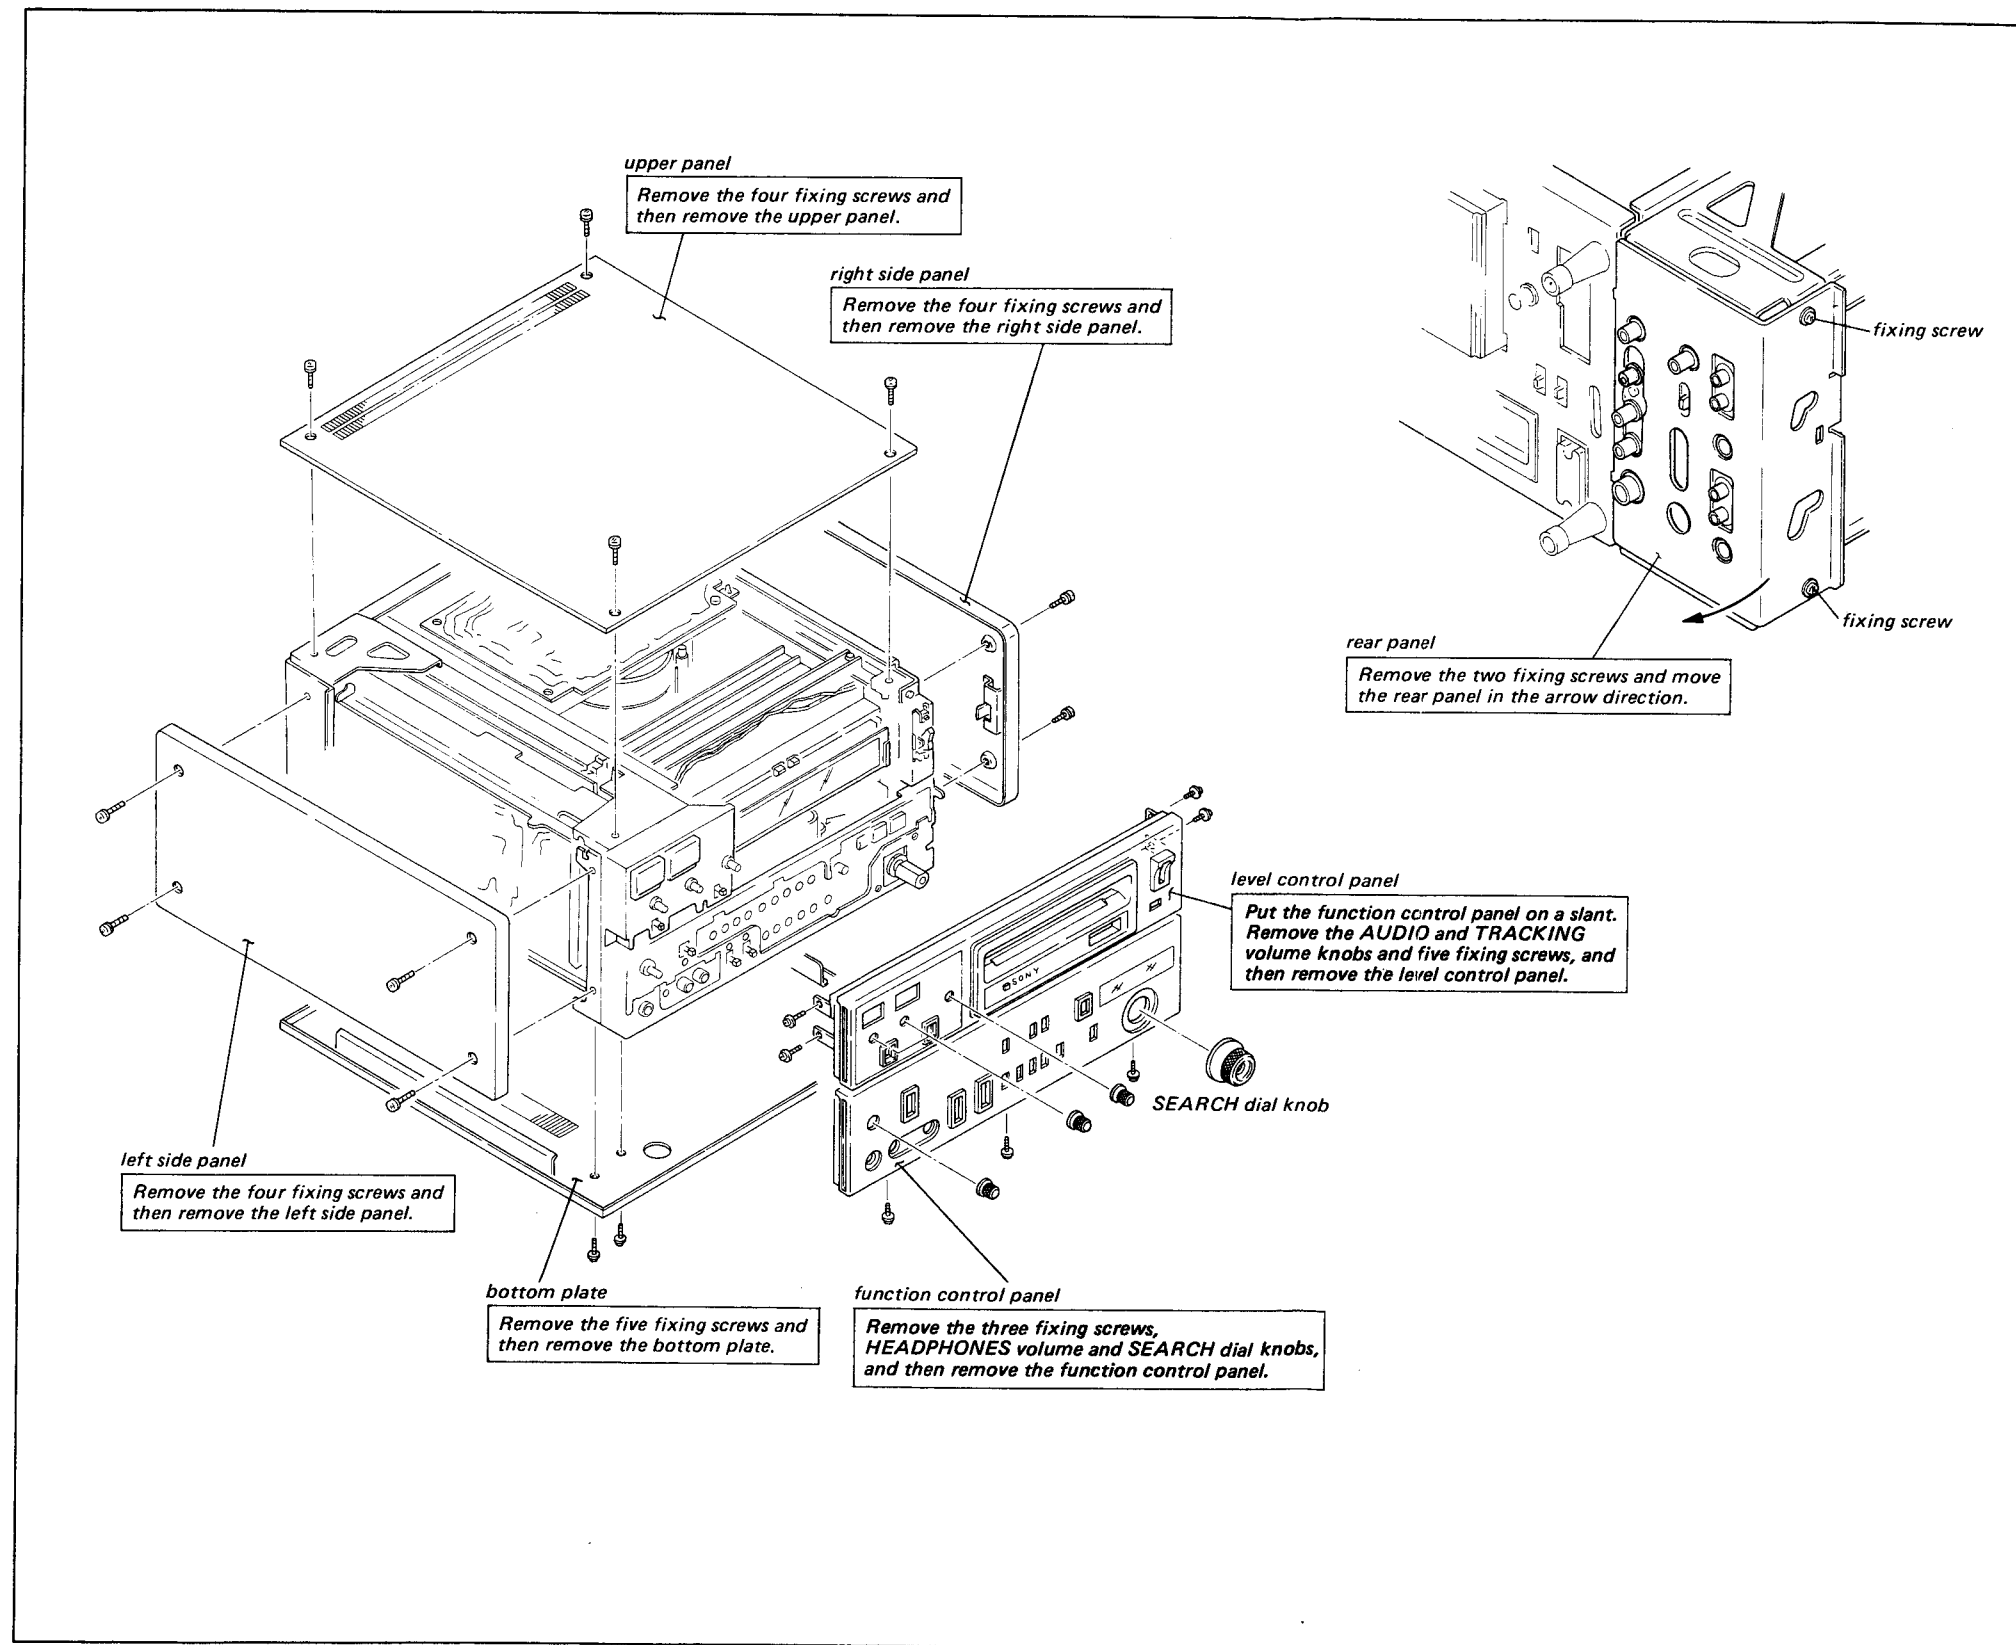

2-10. STOP (E-to-E) MODE

When the cassette tape that the red button is placed on the bottom is inserted into the VTR, the E-to-E picture is obtained on the monitor screen in the FR-STOP mode. The E-to-E picture is also obtained in the EJECT completion (cassette-up) mode. If you want to set up into the STOP (E-to-E) mode in electrical adjustment, perform the above-mentioned step.

NOTE: Do not use the alignment tape to set up the STOP (E-to-E) mode.

SECTION 2 SERVICE INFORMATION

2-1. DISASSEMBLY OF CABINET

2-2. CASSETTE-UP COMPARTMENT REMOVAL AND INSTALLING PROCEDURES

- (1) Remove the upper panel and right side ornamental panel.
- (2) Disconnect the connector of cassette-up compartment.
- (3) Disconnect the harness from the stay.
- (4) Loosen the fixing screw of the right-end of stay.
- (5) Remove the stay from boss of side panel.
- (6) Remove the cassette-up compartment.

Reverse the removal procedure for installing the cassette-up compartment.

2-4. SPARE PARTS

1. Safety Related Components Warning.
Components identified by shading marked with Δ on the schematic diagrams, exploded views and electrical spare parts list are critical to safe operation. Replace these components with Sony parts whose part numbers appear in this manual or in service bulletins and service manual supplements published by Sony.
2. Replacement Parts supplied from Sony Parts Center will sometimes have a different shape from the original parts. This is due to "accommodating the improved parts and/or engineering changes" or "standardization of genuine parts". This manual's exploded views and electrical spare parts list indicate the parts numbers of "the standardized genuine parts at present".
Regarding engineering parts changes in our engineering department, refer to Sony service bulletins and service manual supplements.
3. Printed Components in Bold-Face type on the exploded views and electrical spare parts list are normally stocked for replacement purposes. The remaining parts are not normally required for routine service work. Orders for parts not shown in Bold-Face type will be processed, but allow for additional delivery time.

2-5. MACHINE POSITION FOR REPAIR WORK

When the system control circuit repair work is attempted or mechanical maintenance is attempted, place the machine with its left side panel on its top.

2-6. CASSETTE REMOVAL PROCEDURE WHEN NORMAL EJECTION IS NOT POSSIBLE

If the eject operation becomes impossible due to trouble or the cassette-up compartment does not rise when the eject operation takes place, the cassette tape can be removed from the set by the procedures described below.

- (1) Turn off the POWER.
- (2) Remove the upper panel and right side ornamental panel.

- (3) Turn the white colored pulley of the gear box in the clockwise direction with finger until the threading ring places into the FR-STOP position.
(The threading ring moves in the unthreading direction. But the tape remains at the position of threading completion.)

- (4) Disconnect the connector of the cassette-up compartment.
- (5) Loosen the right-end fixing screw of the stay, and remove the stay from the boss of the side panel.
- (6) Bring up the cassette-up compartment with the cassette tape in it slowly. Remove the tape remaining in the set carefully so that it does not damage.
- (7) Hold the cassette tape lid so that it does not close. Wind the tape into the cassette tape by turning the reel hub on the back of the cassette tape with finger.

- (8) Raise the cam for opening the lid and close the cassette tape lid.

- (9) Remove the tape from the cassette compartment.
- (10) Turn the gear on the right side of the cassette compartment counterclockwise direction by hand in order to place the cassette compartment into the up state.
- (11) Locate the cause of the trouble and remedy the problem.

2-7. TO OPERATE THE MACHINE WITHOUT INSTALLING CASSETTE TAPE

- (1) Remove the cassette-up compartment referring to sec. 2-2. (Tape beginning sensor and tape end sensor are disabled according to disconnect the connector of cassette-up compartment.)
- (2) Turn off the POWER. (The machine is put into the FR-STOP mode automatically.)
- (3) The machine can be placed into the desired mode by pressing the function button to corresponding to the mode.

2-8. TO SET UP 10 TIMES PICTURE SEARCH MODE WITHOUT RM-440

- Search picture at 1/30 to 5 times normal speed can be obtained in both forward and reverse directions by the SEARCH dial on the function control panel. When the KCS cassette is inserted into VTR and the RM-440 is connected to VTR, 10 times picture search is also obtained with the SEARCH dial on the RM-440.

- If RM-440 is not available, 10 times picture search mode is set up as the following procedures.

- (1) Unsolder the jumper solder between IC136 pin 4 and IC33 pin 6 on SY-68C board.
- (2) Temporarily connect 10 k Ω resistor between IC136 pin 4 and IC33 pin 6 on SY-68C board.
- (3) Short between IC33 pin 6 and E8 on SY-68C board with jumper lead.
- (4) Unsolder the jumper solder between IC134 pin 3 and IC32 pin 4 on SY-68C board.
- (5) Temporarily connect 10 k Ω resistor between IC134 pin 3 and IC32 pin 4 on SY-68C board.
- (6) Short between IC32 pin 4 and E8 on SY-68C board with jumper lead.
- (7) Short between CN32 pin 11 and E8 on SY-68C board with jumper lead.
- (8) FWD direction picture search
Short between CN22 pin 5 and +5 V with jumper lead.
REV direction picture search
Short between CN22 pin 5 and E8 with jumper lead.

After check and/or adjustment is performed, the reset circuit is made to original.

2-9. TAPE SLACK DETECTOR

If the tape is not taken up and tape slack is occurred in the machine, these conditions are detected with the reel rotation detector under the reel table. The reel rotation detector is composed with the slit of the reel table and the photointerrupter. If the reel table is stopped its rotation more than the listed time in FWD, REV and unthreading modes, the reel rotation detector circuit detect as the tape slacks in the machine, and generates the auto stop signal.

Mode	Time
$\times 1$ speed ~	0.3 sec.
$\times 1/10 \sim \times 1$ speed	1.6 sec.
$\sim 1/10$ speed	9.6 sec.

2-10. STOP (E-to-E) MODE

When the cassette tape that the red button is placed on the bottom is inserted into the VTR, the E-to-E picture is obtained on the monitor screen in the FR-STOP mode. The E-to-E picture is also obtained in the EJECT completion (cassette-up) mode.
If you want to set up into the STOP (E-to-E) mode in electrical adjustment, perform the above-mentioned step.

NOTE: Do not use the alignment tape to set up the STOP (E-to-E) mode.

2-13. CASSETTE-UP COMPARTMENT OPERATION

The cassette insertion system in the VO-5800PS is a front access system. The cassette compartment drops automatically after the cassette tape has been inserted into the cassette compartment and threading action is started after the cassette is seated in the home position.

The timing of the electronic switches and motor are referring sec. 2-15.

The cassette down switch, cassette in switch and cassette compartment motor operates as follows:

(1) Cassette Down Switch

The cassette tape is inserted by hand and then the cassette pushing lever (called (A) for making the sentence simple) moves in the direction indicated by arrow (a).

The down switch arm (called (C)) which has been held by the pin (called (B)) of the (A) moves in the direction shown by arrow (b) with the movement of (A), and the shutter of (C) opens the photo-interrupter on the CC-11 board. Then the DOWN switch turns to "L".

(2) Cassette In Switch

The cassette tape is inserted by hand further after the DOWN switch operates (until the cassette is stopped).

The (A) shutter covers the photo-interrupter on the CC-10 board and the IN switch turns to "H".

(3) Cassette Compartment Motor (C.C. Motor)

When the IN switch turns to "H" after the cassette insertion, about 11.3 V is impressed on the C.C. motor via the CC-9 board and the motor starts. The power of the motor moves the cassette compartment through the belt and the gears.

(4) Cassette Tape Lid Opener

When the cassette tape is inserted, the C.C. motor rotates, and the cassette compartment moves.

The lid opener arm holds the bottom section of the cassette lid at the point where the horizontal movement of the cassette compartment changes to the vertical movement. The lid is opened following with the downward movement of the cassette compartment.

2-14. TAPE TENSION CONTROL MECHANISM

The tape tension control mechanism of VO-5800PS is composed with the mechanical and electrical tape tension control mechanisms.

- (1) The tape tension control mechanism in normal playback, record, FWD search and unthreading modes (when the take-up reel table rotates in the counterclockwise direction (except FF mode)) is as follows:

- (i) Tape feeding side (supply reel table side)

The tape back tension control mechanism of the tape feeding side is the same as the conventional VTR. This back tension control mechanism is the mechanical tape tension control mechanism.

- (ii) Tape taking-up side (take-up reel table side)

The tape tension of the take-up side is controlled with the electrical tape tension control mechanism. The R brake shoe is released from the take-up reel table in this mode. The electrical tape tension control mechanism is composed with the following blocks.

The light emitted by an LED is received by the CdS detector element through a slit on the shutter connected with the tape guide. The electrodes' pattern of this CdS is shown in figure.

The slit moves with the tape tension change and the point where the light reflector moves. Then the resistance values between ① ~ ② and the resistance between ③ ~ ② are vary. The tape tension around the tension detector tape guide is detected by the resistance variation. This resistance variation output controls the reel motor torque and the tape tension is controlled.

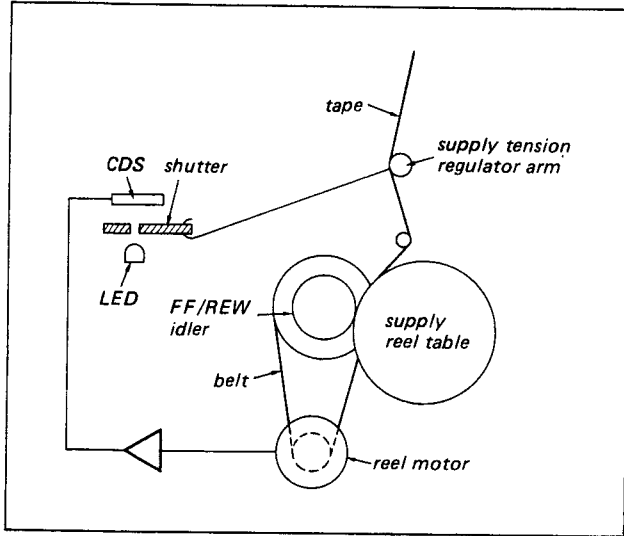

- (2) The tape tension control mechanism in REV search mode (when the supply reel table rotates in the counterclockwise direction (except REW mode)) is as follows:

- (i) Tape feeding side (take-up reel table side)

The tape is supplied from the take-up reel table in this mode. The tape tension control mechanism is the same as the supply side tape tension control mechanism as mentioned former.

- (ii) Tape taking-up side (supply reel table side)
The tape tension of the take-up side (supply reel table side) is controlled with the electrical tape tension control mechanism.

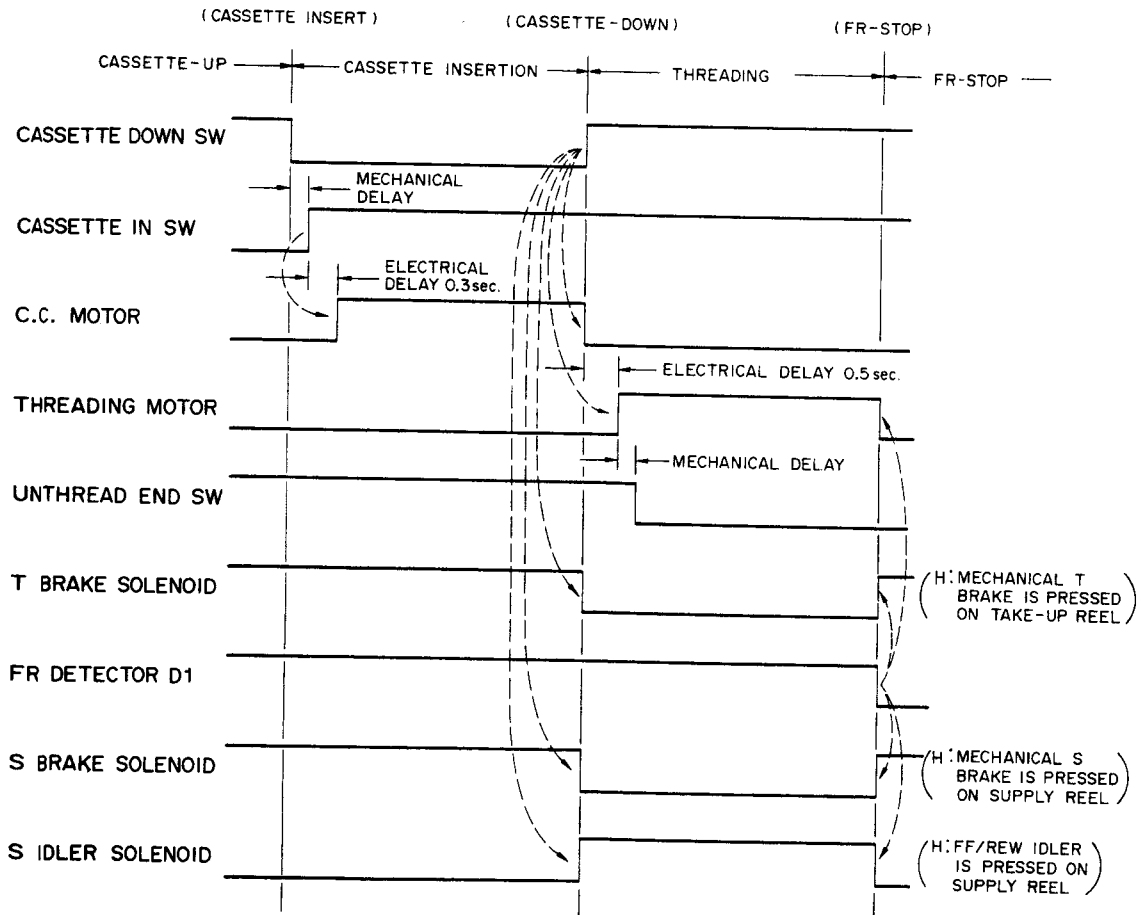

2-15. TIMING OF SWITCH, MOTOR AND SOLENOID

- The timing of the electronic switches, motors and solenoids in the following modes are follows.

Cassette in → FR-STOP
FR-STOP → FWD → FWD/PAUSE
FR-STOP → REC → REC/PAUSE
FWD → FWD SEARCH → REV SEARCH
FWD → FR-STOP
FR-STOP → FF → FR-STOP
FR-STOP → EJECT Completion

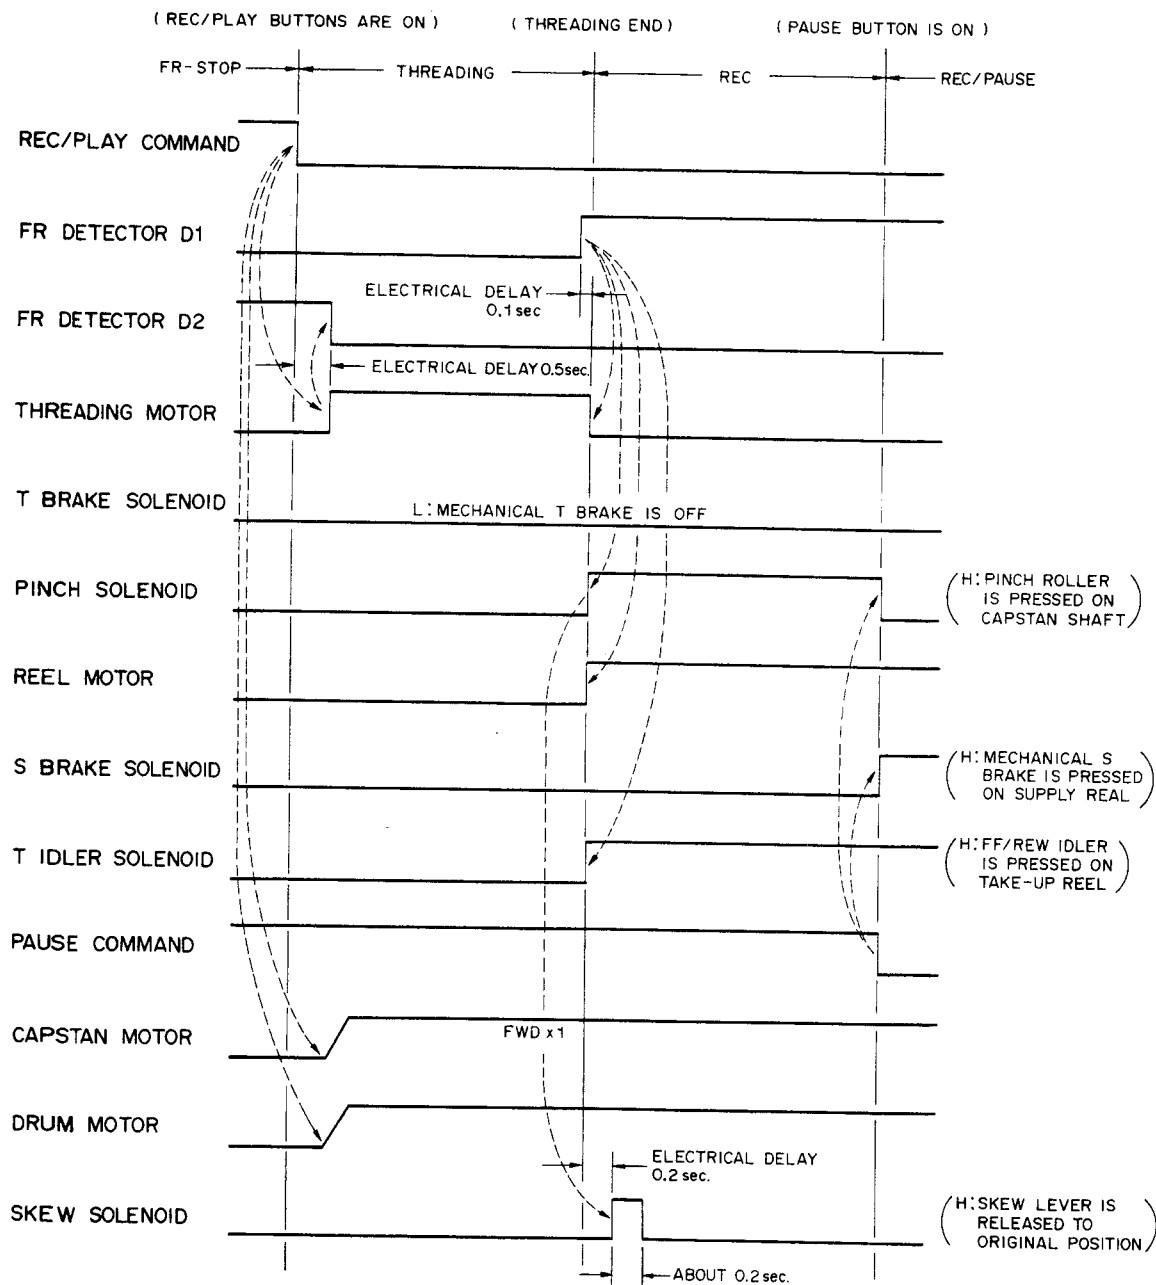

• CASSETTE - IN → FR - STOP

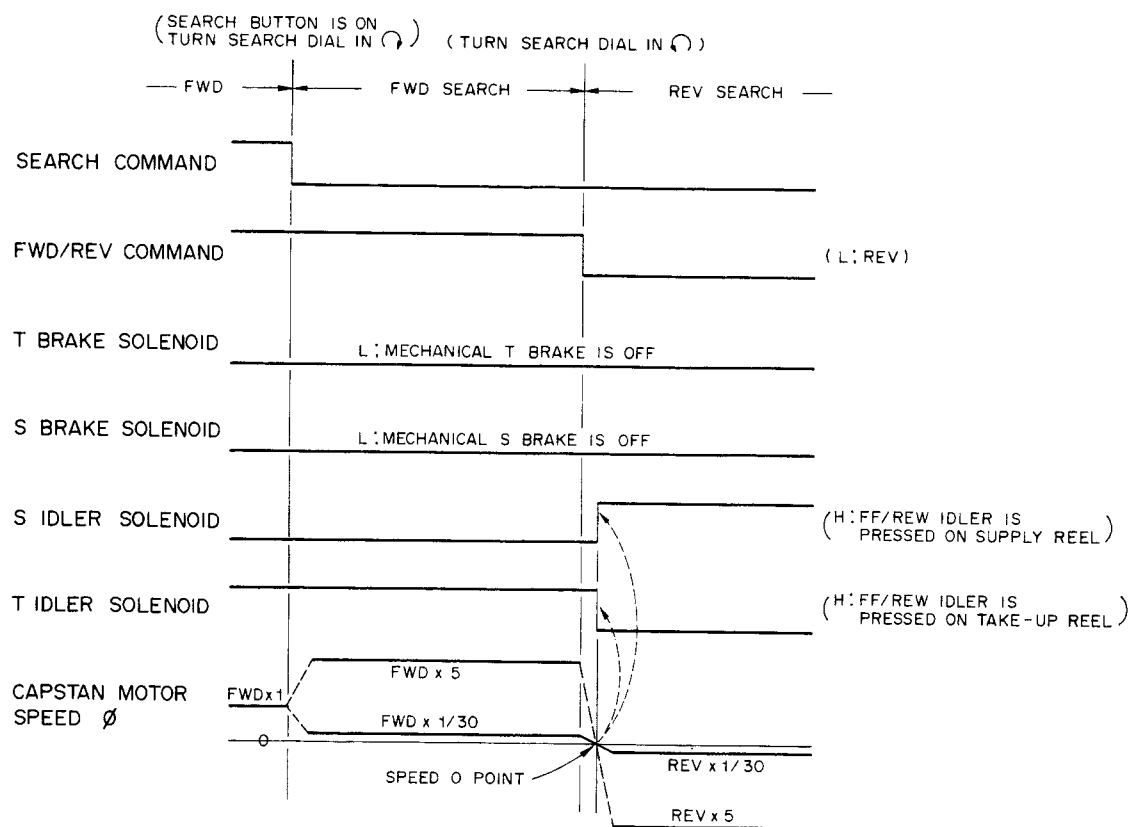

• FR-STOP → FWD → FWD/PAUSE

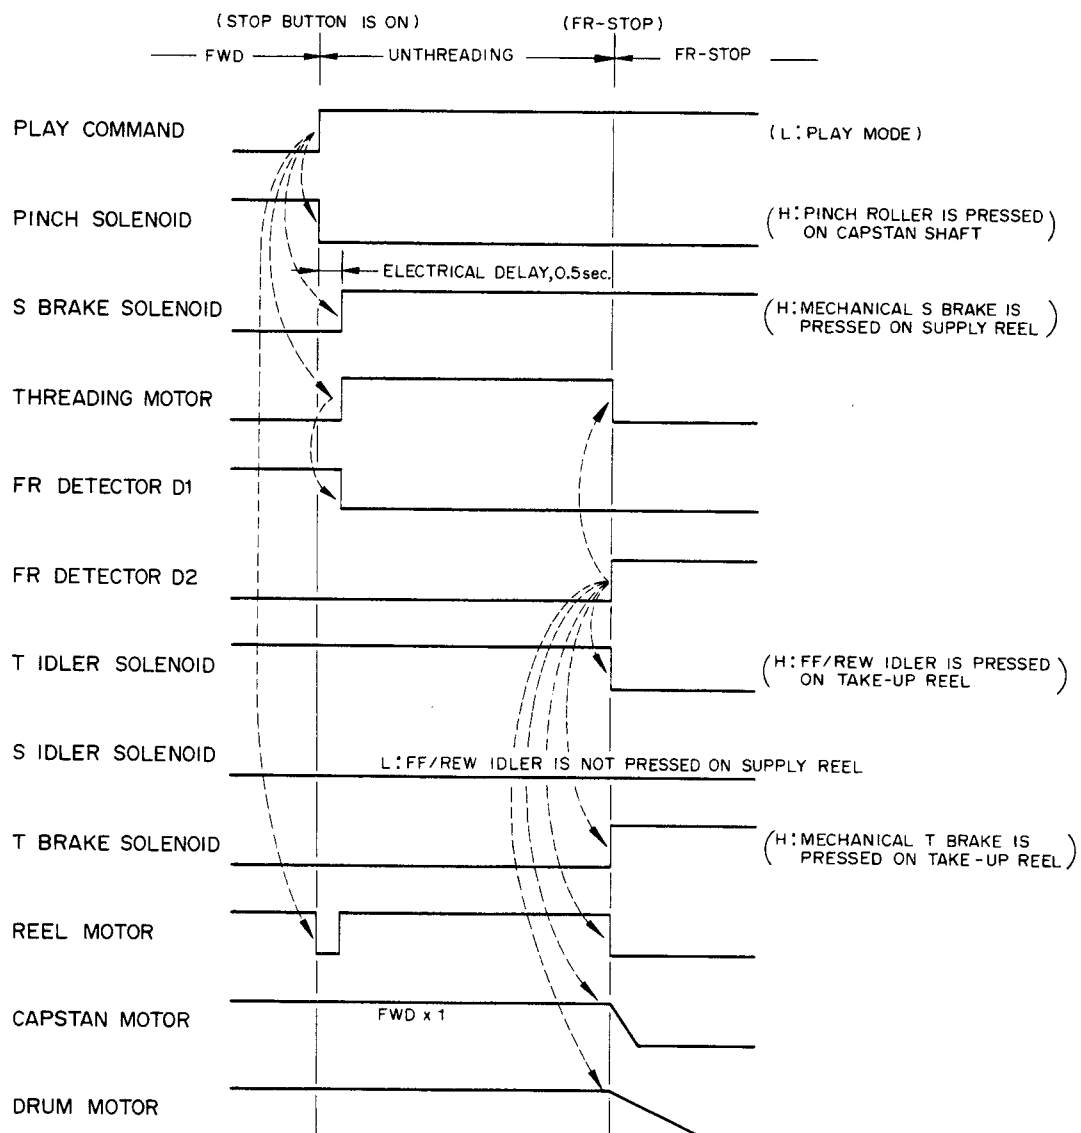

• FR-STOP → REC → REC/PAUSE

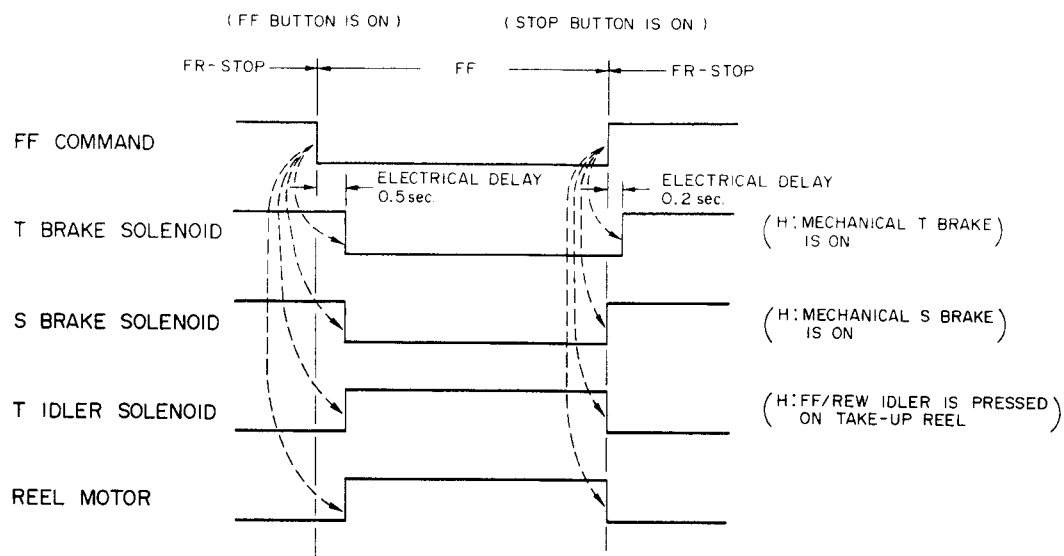

• FWD → FWD SEARCH → REV SEARCH

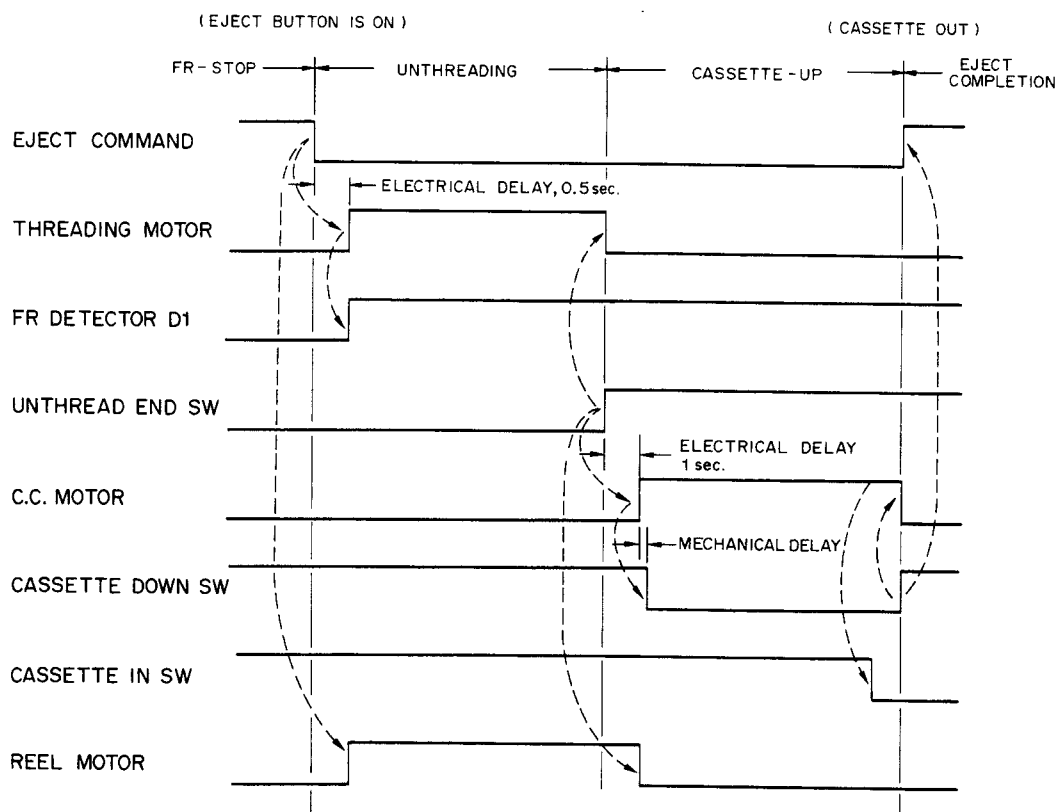

• FWD → FR-STOP

• FR-STOP → FF → FR-STOP

• FR-STOP → EJECT COMPLETION

SECTION 3

PERIODIC CHECK AND MAINTENANCE

It is recommended to perform the maintenance and the periodic check mentioned below for the best operation of the function and performance of the machine and for prolonging the lives of the machine and the tape.

3-1. MAINTENANCE AFTER REPAIRS

Perform the following maintenance after the repair without regarding the operating hours of the machine.

- (1) **Cleaning of video heads and rotary erase heads**
 - Press the cleaning piece moistured with the cleaning fluid and turn the drum slowly with the hand, cleaning the heads. (Never turn the motor by the electric power for the cleaning.)
 - Never move the cleaning piece in the vertical direction of the head tip in the cleaning. It tends to damage the head tips.
- (2) **Cleaning of tape running system**
 - Wipe the tape bearing surfaces (of the tape guide, drum, capstan, and pinch roller) with cleaning piece saturated with the cleaning fluid.
- (3) **Cleaning of drive system**
 - Wipe the drive system (such as belt, idler, and reel table surface) with cleaning piece saturated with the cleaning fluid.

3-2. PERIODIC CHECK

Perform the maintenance checks described separately in accordance with the operational hours of the machine.

3-3. HOURS METER

The VO-5800PS has an hours meter on the ML-1 board for the periodic check and the maintenance. The hours meter accumulates and records the elapsed time of all the modes in which the drum rotates while the tape is threaded. It is recommended that the hours meter is used as a tool for determining the periodic check. When the hours meter indicates the maximum value, 1000 hours, the hours meter must be replaced with a new one.
(SONY Part No.: 1-548-119-00)

3-4. OTHERS

- (1) **SONY oil**
 - Be sure to use the SONY oil as the lubrication oil. (If oil other than the SONY oil is used, various troubles due to a different viscosity tends to be caused.)
SONY oil: Part No. 7-661-018-01
 - Use the SONY oil in which dust or other foreign material have not mixed for lubricating the bearing. (If foreign material is in the oil, wear or burning of the bearing tends to be caused.)
- (2) **Grease**

Be sure to use the following grease.
SONY grease: Part No. 7-662-001-62 (SGL-501)
- (3) **Regarding overhaul of equipment**

When overhaul of an equipment is attempted, replace parts referring list. For the parts not listed in the list, such as motors and heads, refer the following items.

Reel motor;	about 3,000H
Capstan motor;	about H
Threading motor;	about H
Cassette-up compartment motor;	about H
Audio/CTL head;	about 3,000H
CTL/Erase head;	about H

■ : apply oil ○ : cleaning ◆ : replace ◇ : check ⊙ : apply a grease

Item	Operating Hours (H)		500	1,000	1,500	2,000	2,500	3,000	3,500	4,000	4,500	5,000	Remarks

SECTION 4

REPLACEMENT OF MAJOR PARTS

4-1. REPLACEMENT OF UPPER DRUM ASSEMBLY

- The rotary video heads cannot be replaced individually; the whole upper drum assembly must be replaced when any one of these heads fails.

Tool:

- Drum eccentricity gauge (1)
- Drum eccentricity gauge (2)
- Drum eccentricity gauge (3)
- Drum eccentricity gauge (4)
- Cleaning fluid

Replacement procedure:

- (1) Unsolder the four leads of the video head from the printed circuit board and remove the upper drum assembly from the head drum assembly.
- (2) Clean the matching surfaces of the flange and new upper drum assembly with a cloth moistened with cleaning fluid. (If there is a spacer between drum and flange, it should be remain in place, or be re-installed in the same place with the new upper drum assembly.)
- (3) Place the upper drum assembly so that the head of the white leads is close to the round indentation on the surface of the flange. (The rounded indentation can be seen through the hole in the end of the printed circuit board the white leads are connected to). Thread the two screws snugly but do not tighten.

Adjustment procedure:

- (1) Remove the S guard block (Because the S guard's bottom connector is inserted into the connector on the chassis, it need the power to remove.)
- (2) Assemble the drum eccentricity gauges (1), (2), (3) and (4) as shown in figure. Mount the assembled gauges on the machine so that the tip probe positiones at the point about 5 mm apart from the top edge of the upper drum.
- (3) Turn the upper drum slowly clockwise and confirm the pointer deflection of the gauge is within 5μ during one complete turn of the upper drum. If this specification is satisfied, proceed with step (5). If it is not, perform step (4).
- (4) Tap the inside of the upper drum with a nylon hammer or a screwdriver handle and like so that the gauge deflection remains within 5μ .
- (5) After the adjustment, tighten the two screws that are securing the upper drum, alternately and gradually using a tightening torque: 14 ~ 16 kg.cm.

- (6) After the screws are tightened, check again that the eccentricity of the upper drum is within 5μ .
- (7) Solder the four leads from the video heads to the printed circuit board.
- (8) Install the S guard block.
- (9) Perform the various adjustments as shown in page 4-6.

4-2. REPLACEMENT OF DRUM ASSEMBLY

Replacement procedure:

- (1) Disconnect the connectors (CN1 and CN2) of the drum assembly and CN2 on the RP-8A board.
- (2) Remove the three fixing screws on the back of the chassis and remove the defective drum.
- (3) Install the drum on the base while turning the drum assembly in the clockwise direction as seen from top of the set.
- (4) Connect the three connectors.
- (5) Perform the various adjustments as shown in page 4-6.

4.3. REPLACEMENT OF CAPSTAN MOTOR

Replacement procedure:

- (1) Remove the capstan motor.
- (2) Install the new capstan motor and thread three fixing screws snugly but do not tighten.
- (3) While turning the capstan motor in the counterclockwise direction as seen from top of the set and tighten the fixing screws.

4.4. REPLACEMENT OF CTL PB HEAD

Replacement procedure:

- (1) Remove the locking screw and remove the CTL PB head from the chassis.
Do not tighten or loosen three adjusting screws.
- (2) Loosen the two fixing screws under the bracket and replace the CTL PB head.

4-5. REPLACEMENT OF S DRAWER ROLLER

Replacement procedure:

- (1) Put the machine into the EJECT completion mode without cassette tape.
- (2) Turn the pulley of the gear box with finger until the S drawer roller places in front of the CTL PB head.
- (3) Remove the S drawer roller from the shaft while pushing the spring holder in the arrow direction.
- (4) Install the new S drawer roller into the shaft until the S drawer roller lockes to the shaft while pushing the spring holder in the arrow direction.

4-6. REPLACEMENT/ADJUSTMENT OF TAPE GUIDES ON THREADING RING

Tool and equipment:

Slide vernier calliper or the equivalent.
Cleaning fluid.

Replacement procedure:

- (1) Remove the tape guide.
- (2) Clean the surface of the shaft with a cloth dampened with a cleaning fluid.
- (3) Assemble the parts.
- (4) The sub-ring upper tape guide and lower tape guide are necessary to perform the guide width adjustment.

Adjustment procedure:

- (1) Adjust the tape guide width to meet the required specification.

Spec.:
19.4 mm ~ 19.5 mm

4-7. ADJUSTMENT ITEM TABLE AFTER MAIN PARTS REPLACEMENT

Replacement Parts	Adjustment Items
• Threading Ring	Threading Ring Rotation Adjustment (5-3-1) → Gear Box Position Adjustment (5-3-2) → FR Detector Block (5-3-4) Mounting Position Adjustment (5-3-3) → Pinch Roller Self-Alignment Adjustment (5-3-3) → Pinch Lever Pre-set Adjustment (5-4-1) Pinch Roller Pre-set Adjustment (5-4-2) → FF and REW Modes Tape Path Adjustment (7-1) T Correction Guide Slantness Adjustment (7-2) → Tape Path Adjustment Around Pinch Roller (7-6, (7-6-1, 7-6-2)) FWD Mode Tape Path Adjustment (1) (7-3) → FWD Mode Tape Path Adjustment (2) (7-4) REV Mode Tape Path Adjustment (7-5) → Video Tracking Adjustment (7-8-1) → CTL. PB Head (7-8-2) Height/Azimuth/Zenith Adjustment → Video Tracking Adjustment (check). (7-8-1)
• Pinch Roller	Pinch Roller Self-Alignment Adjustment (5-3-3) → Pinch Roller Pre-set Adjustment (5-4-2) → FWD Mode Tape Path Adjustment (2) (7-4) REV Mode Tape Path Adjustment (7-5) → Tape Path Adjustment Around Pinch Roller (7-6, (7-6-1, 7-6-2)) Video Tracking Adjustment (check). (7-8-1)
• Take-up Reel Table	Reel Table Height and Vertical Play Adjustment (5-1-2) → T Brake Torque Adjustment (6-1-2) → REW Brake Torque Adjustment (6-1-3) → FF and REW Torque Adjustment (6-2) → FWD Torque Adjustment (6-3) FF and REW Tape Path Adjustment. (7-1)
• Supply Reel Table	Reel Table Height and Vertical Play Adjustment (5-1-2) → S Brake Torque Adjustment (6-1-1) → FF and REW Torque Adjustment (6-2) REV Torque Adjustment (6-4) → FF Back Tension Adjustment (6-5) FWD Back Tension Adjustment (6-6) → Video Tracking Adjustment (check). (7-8-1)
• Brake Band	FF Back Tension Adjustment (6-5) → FWD Back Tension Adjustment. (6-6)
• Capstan Motor	Pinch Lever Right Angle Adjustment (5-11) → Pinch Roller Self-Alignment Adjustment (5-3-3) → Capstan SEARCH x1 Speed Adjustment (9-9) → Capstan FWD and REV Detector Adjustment (9-3) Free Speed Adjustment (9-4) → Capstan STOP Servo Adjustment (7-4) → FWD Mode Tape Path Adjustment (2) (7-5) → REV Mode Tape Path Adjustment (7-6, (7-6-1, 7-6-2)) Video Tracking Adjustment (check). (7-8-1)
• Threading Motor	Gear Box Position Adjustment. (5-3-2)
• Reel Motor	FWD Torque Adjustment (6-3) → REV Torque Adjustment (6-4) → Still Speed Adjustment. (9-15-2)
• CTL. PB Head	CTL. PB Head Height/Azimuth/Zenith Adjustment (7-8-2) → Tracking Adjustment (check). (7-8-1)
• Audio/CTL Head	Audio Head Height Adjustment (7-8-3) → Audio Head Azimuth Adjustment (7-8-5) → Video Tracking Adjustment (7-8-1) Audio Head Height Adjustment (7-8-3) → Audio Head Azimuth Adjustment (7-8-5) → Audio Head Phase Adjustment (7-8-6) → Audio/CTL Head Position Adjustment (7-8-7) → Audio System Alignment. (10-1 ~ 10-11)

Replacement Parts	Adjustment Items
• Drum Assembly	Tracking Adjustment (7-8, (7-8-1 ~ 7-8-7)) → FF and REW Tape Path Adjustment (7-1) → FWD Mode Tape Path Adjustment (7-4) → REV Mode Tape Path Adjustment (7-5) → Video Head Dihedral Adjustment (7-9) → Drum AFC Bias Adjustment (9-10) → Drum AFC Transient Adjustment (9-11) → Drum Lock (9-12) → Phase Adjustment (9-14) → Switching Position Adjustment (9-14) → PB RF Amplifier Adjustment (11-1, (11-1-1 ~ 11-1-5)) → Record Amplifier Adjustment (11-4, (11-4-1 ~ 11-4-3))
• Upper Drum Assembly	Upper Drum and Eccentricity Adjustment (4-1) → Tracking Adjustment (7-8, (7-8-1 ~ 7-8-7)) → FF and REW Tape Path Adjustment (7-1) → FWD Mode Tape Path Adjustment (2) (7-4) → REV Mode Tape Path Adjustment (7-5) → Video Head Dihedral Adjustment (7-9) → PB RF Amplifier Adjustment (11-1, (11-1-1 ~ 11-1-5)) → Record Amplifier Adjustment (11-4, (11-4-1 ~ 11-4-3))

SECTION 5

LINK AND DRIVE SYSTEM ALIGNMENT

5-1. REEL TABLE SYSTEM ADJUSTMENT

5-1-1. Cassette Holder Position Adjustment

Tool and equipment:

Reel table height check base jig.
Thickness gauge.

Mode: EJECT completion

Check procedure:

Check that the clearance between the base jig and the cassette holder meets the required specification while pushing lightly the reel table height check base jig marked (A), (B) and (C) toward the chassis.

Adjustment procedure:

Adjust the position of the cassette holder so that meets the required specification.

5-1-2. Reel Table Height and Vertical Play Adjustment

- Since the reel table height from the chassis functions as the reference height in the entire tape thread and run system, it is requested that the reel table height adjustment should be attempted carefully, and deliberately.

Mode: EJECT completion

Tool and equipment:

Reel table height check base jig.
Reel table height check jig.
Slide vernier callipers or the equivalent.

Check procedure:

- The probes of the reel table height check jig marked "SO" and "TO" can slide over the reel table, leaving a space between the jig and the reel table, while the probes marked "SX" and "TX" are blocked, and cannot slide over reel table.
 - Use the "SO" and "SX" probes for the supply reel table.
 - Use the "TO" and "TX" probes for the take-up reel table.

- (2) Fasten a reel table securing screw, and push up and down the reel table for inspection. Check that the vertical play meets the required specification.

Adjustment procedure:

- (1) Adjust height by the washer from under the reel table.
- (2) Adjust vertical play by the washer on top of the reel table.

< NOTE >

Apply a drop of SONY oil on the reel spindle as shown in figure, whenever the reel table is removed and is adjusted its height with washer.

Amount of oil should be one drop that is scooped by tip of 2 mm diameter twig such as pencil lead.

- 6 mm diameter washer
 - 0.5 mm thick, 3-701-444-21
 - 0.25 mm thick, 3-701-444-11
 - 0.13 mm thick, 3-701-444-01

Spec.:
vertical play
0.17 mm ~ 0.38 mm

5-2. T DRAWER ARM ADJUSTMENT

5-2-1. T Drawer Arm EJECT Position Adjustment

Mode: Setting up FR-STOP mode without cassette tape, and press the EJECT button for setting up EJECT completion state.

Check procedure: Check that the relationship between the lower flange of T tension regulator arm and the T drawer arm meets the required specification.

Adjustment procedure: Adjust the position of drive link (B) ass'y by the flat blade screwdriver, 3 mm dia. so that meets the required specification.

5-2-2. Unthread-end Switch Position Adjustment

Tool and equipment:

Black colored vinyl tape (1 cm x 1.5 cm)

Preparation: (1) Turn the POWER off in the FR-STOP mode.
(2) Remove the FR detector block, and cover the D2 photo-interrupter (FR-UNTHREAD END Detector) by the black colored vinyl tape. (Put the FR detector in the FR-STOP mode constantly.)

Check procedure:

- (1) Turn POWER on and rotate the pulley of gear box block in the clockwise direction with finger.
- (2) While the relationship of the T drawer arm and the T tension regulator arm is shown in the figure, check that a energized noise of the take-up brake solenoid is heard in this moment.

Adjustment procedure:

- (1) Adjust the position of the photo interrupter holder by the flat blade screwdriver, 3 mm dia. so that meets the required specification.
- (2) Turn POWER off, and mount the FR detector block after peel off the black colored vinyl tape.
- (3) Adjust the FR detector block mounted position. (sec. 5-3-4.)
- (4) Hook the spring on the FR detector block from the pinch lever block.

5-3. THREADING SYSTEM ADJUSTMENT

5-3-1. Threading Ring Rotation Adjustment

- This adjustment is required only when the threading ring is replaced or removed.
- If the threading ring is left unadjusted to have narrower clearance, the ring rotation becomes heavy, or if left to have wider clearance, tape run during threading, FWD, REV and 10 times picture search modes will be unstable.

Mode: Check mode; EJECT completion/threading/unthreading
Adjustment mode; EJECT completion

Check procedure:

- (1) Check that the horizontal play meets the required specification when the threading ring is pushed in the arrow direction in the EJECT completion mode.
- (2) Check that the rotation of the threading ring into the threading and unthreading modes are smooth.

Adjustment procedure:

- (1) Put the machine into the EJECT completion mode.
- (2) Adjust the position of the ring roller (C) so that meets the required specification.

Adjusting procedure;

- Insert a 0.3 mm thick paper between the threading ring and the ring roller (C).
- Paper of this service manual is 0.1 mm thick so that the three fold becomes 0.3 mm thick.

5-3-2. Gear Box Position Adjustment

- It is required that the sec. 5-3-1 threading ring rotation adj. is checked to be correct or properly adjusted before initiating this adjustment.

Mode: After completion of EJECT, turn the pulley 1/2 to 1 revolution in the direction of Arrow C in order to push out the Threading.

Check procedure:

- (1) In order to make them easier to see during the Adjustment, mark the two lines on the top surface of the gear with a black felt tip pin.
- (2) Turn the pulley so that one of the lines is roughly parallel to the outer circumference of the Threading Ring.
- (3) Check to be certain that the relationship between the outer circumference of the Threading Ring and the Gear is within the Specifications.

Adjustment procedure:

- (1) With the unit's EJECT completed and the pulley turned 1/2 to 1 revolution (as stated above under MODE), turn the pulley back and forth, as indicated by Arrows C and D, so that the Threading Ring and the Gear engage smoothly.
- (2) Adjust the position of the Gear Box by moving it in the direction indicated by Arrow E until it is within the Specifications.
- (3) Check the sec. 5-3-1 threading ring rotation adj.

Spec.:

- (a) When the Threading Ring is moved in the direction of Arrow A, its outer circumference should be on or touching Line "f".
- (b) When the Threading Ring is moved in the direction of Arrow B, its outer circumference should be on or touching Line "g".
- (c) An oval hole of 0.1 to 1.5 mm should be visible.

5-3-3. Pinch Roller Self-Alignment Adjustment

- If the pinch roller self-alignment is poor, pinch roller's position and inclination against the capstan are erroneous so that the tape will get sear, in the instance of pinch roller's pressing against the capstan.
- Perform the pinch roller pre-set adjustment after this adjustment.

Mode: PLAY

Check procedure:

- (1) Put the machine into PLAY mode without cassette.
- (2) Check that the relationship between the pinch roller arm (A) and (B) meets the required specification.

Adjustment procedure:

- (1) Put the machine into PLAY mode without cassette.
- (2) Loosen the fixing screw of sub ring stopper.
- (3) Turn the pulley of gear box block in the arrow direction with finger.
- (4) Push the sub ring stopper in the arrow direction and tighten the fixing screw.
- (5) Put the machine once into the FR-STOP mode, and confirm as check procedure.

5-3-4. FR Detector Block Mounting Position Adjustment

- It is required that the sec. 5-3-1 threading ring rotation adj. is checked to be correct or properly adjusted before initiating this adjustment.

Mode: Adjustment mode; THREADING completion

Adjustment procedure:

- (1) Put the machine into THREADING completion mode and turn POWER off.
- (2) Press the FR detector block against the threading ring, and then return about 1 mm. (Don't return more than 1.5 mm) (Spec. 1)
- (3) Adjust the position of the FR detector block in the arrow direction so that meets the required specification 2.
- (4) Check that the clearance meets the required specification 1.

5-4. PINCH LEVER BLOCK ADJUSTMENT

5-4-1. Pinch Lever Pre-set Adjustment

- It is required that the threading ring rotation adj. and the pinch roller self-alignment adj. are checked to be correct or properly adjusted before initiating this adjustment.

Mode: Turn POWER off in PLAY mode.

Check procedure:

- Turn POWER off in PLAY mode. Check that the position of the pinch solenoid pin meets the required specification.
- Turn POWER on, and press the PLAY button after once unthreading. Check as procedure (1).

Adjustment procedure:

- Adjust the position of pinch solenoid within the specified value, refer to sec. 5-8-5.
- If not in step (1), perform the pinch roller self-alignment adjustment within the specified value, refer to sec. 5-3-3.
- If not in step (1) and (2), select the pinch lever pre-set adjustment link to the proper hole of the preset lever ass'y to meets the specification.

5-4-2. Pinch Roller Pre-set Adjustment

- It is required that the threading ring rotation adj. and the pinch roller self-alignment adj. are checked to be correct or properly adjusted before proceeding this adjustment.

Mode: Turn POWER off in PLAY mode.

Tool and equipment:
Thickness gauge

Check procedure:

- (1) Turn POWER off in PLAY mode. Check that the clearance between the upper portion of pinch roller and the capstan shaft meets the required specification.
- (2) Turn POWER on, and press the PLAY button after once unthreading. Check as procedure (1).

Adjustment procedure:

- (1) Turn POWER off. Move the position of the pre-set cam in the arrow direction so that meets the required specification.
- (2) Confirm as check procedure in this step.

5-4-3. Pinch Solenoid Block Position Adjustment

Mode: PLAY

Tool and equipment:
Thickness gauge

Check procedure:

- (1) Thread a tape and put the machine into PLAY mode.
- (2) Check that the clearance between the pinch lever A and B meets the required specification.
- (3) Repeat the unthreading/threading two or three times. Check as procedure (2).

Adjustment procedure:

- (1) Adjust the position of the pinch solenoid block by the flat blade screwdriver, 3 mm dia. in PLAY mode so that meets required specification.
- (2) Confirm as check procedure (2) and (3).

5-5. T TAPE SENSOR POSITION ADJUSTMENT

- There are two adjustments of the height and the clearance between a tape and LED in this section.

Mode: Thread a tape and put the machine into FR-STOP and PLAY modes.

Tool and equipment:
Thickness gauge

Check procedure:

- Thread a tape and put the machine into FR-STOP mode. Push the tape against the cassette tape side with finger as shown in figure. Check that the clearance between the upper edge of a tape and the under side of T photo holder block (black colored plastic) meets the required specification (Spec. (1)).
- Next, when set to PLAY mode from FR-STOP mode, confirm ※ (2) part of the T Tape sensor block within the specification B of Spec. (2).

Adjustment procedure:

- Bend the ※ (1) marked position in figure with pliers so that meets the required specification. Confirm as check procedure (2).
- Set to PLAY mode from FR-STOP mode and adjust C block so that ※ (2) part of T Tape sensor becomes within the specification A of Spec. (2).

5-6. TENSION ARM SYSTEM ADJUSTMENT

5-6-1. S Drawer Roller Ass'y Limiter Adjustment

Mode: FR-STOP

Check procedure:

Check that the spring holder for S drawer guide, marked (B), of the S drawer arm ass'y is placed into notch of the S guide holder M, marked (A).

Adjustment procedure:

- (1) Adjust the position of the S drawer arm ass'y by the flat blade screwdriver, 3 mm dia. so that meets the required specification.

5-6-2. T Tension Regulator Operating Position Adjustment

Mode: FR-STOP

Tool and equipment:

Thickness gauge

Check procedure:

- (1) Push the T tension regulator arm lightly to the left with finger as far as it will go (in the arrow direction), and remove the finger gently.
- (2) Check that the clearance between T tension regulator arm and stopper meets the required specification.

Adjustment procedure:

- (1) Adjust the position of R brake lever by the flat blade screwdriver, 3 mm dia. so that meets the required specification.

5-6-3. S Tension Regulator Operating Position Adjustment

Mode: FF

Check procedure:

- (1) Put the machine into FF mode without cassette tape.
- (2) Check that the edge of S tension regulator arm (B) meets the required specification.

Adjustment procedure:

- (1) Adjust the position of S tension regulator base so that meets the required specification.

5-6-4. Tension Detector Position Adjustment

Mode: FWD/REV

Tool and equipment:
DC voltmeter

Preparation: Connect dc voltmeter to TP17/SY-68 board.

Check procedure:

- (1) Put the machine into FWD mode without cassette tape.
- (2) Push the T tension regulator arm to the right with finger as far as it will go. Check that the dc voltage is more than 9 V.
- (3) Push the T tension regulator arm to the left with finger as far as it will go. Check that the dc voltage is less than 2 V.
- (4) Put the machine into REV mode.
- (5) Push the S tension regulator arm to the right with finger as far as it will go. Check that the dc voltage is less than 2 V.
- (6) Push the S tension regulator arm to the left with finger as far as it will go. Check that the dc voltage is more than 9 V.

Adjustment procedure:

- (1) Adjust the position of tension detector so that meets the required specification.

5-7. 10 TIMES PICTURE SEARCH OPERATING POSITION ADJUSTMENT

Mode: EJECT completion

Check procedure:

- (1) Turn the gear box pulley to the counterclockwise so that the right-end round hole of skew arm (A) is placed to the just above the shaft on the chassis as shown in figure (viewing through the round hole of skew arm (A)).
- (2) Move the FR lever (A) in the arrow direction as far as it will go. Check that the clearances A, B and C meets the required specification.
- (3) Press the supply tension regulator arm in the arrow direction and take hand off. Confirm as procedure (2).

Adjustment procedure:

- (1) Adjust the position of the R cancel base with the flat blade screwdriver, 3 mm dia. so that meets the required specification.
- (2) Confirm as check procedure (3).

Spec.:
 (A) (B) : There are no clearances.
 $0.1 \text{ mm} \leq \text{C} \leq 0.5 \text{ mm}$

5-8. SOLENOID SYSTEM ADJUSTMENT

5-8-1. Search Solenoid Mounting Position Adjustment

- This adjustment is usually not required. But proceed with the following step only when the search solenoid is replaced or removed.

Mode: Remove the search solenoid block from the chassis.

Adjustment procedure:

Move the iron core into the fully energized position (indicated by the arrow as far as it will go). Adjust the mounting position of the search solenoid so that the overlap of the search FWD arm boss and the search base meet the required specification.

5-8-2. Skew Solenoid Mounting Position Adjustment

Mode: EJECT completion

Check procedure:

Check that the clearance between the skew lock claw and the skew arm B meets the required specification when the skew solenoid iron core is push in the arrow direction.

Adjustment procedure:

Adjust the position of the skew solenoid with a flat blade screwdriver, 3 mm dia. so that meets the required specification.

Spec.:
 $0.2 \text{ mm} \leq a \leq 0.5 \text{ mm}$

5-8-3. T Idler Solenoid Position Adjustment

- This adjustment is performed when T idler solenoid is replaced or removed and F.FWD torque does not meet the specification.

Mode: F.FWD mode without cassette tape

Adjustment procedure:

- (1) Put the machine into F.FWD mode without cassette tape.
- (2) Loosen the T idler solenoid fixing screws about 1/2 turn.
- (3) Adjust the position of the T idler solenoid so that 0.01 ~ 0.1 mm clearance exists between the take-up reel table and the FF idler.
- (4) Note the hole to be provided for adjusting aim after proceeding the procedure (3).
Confirm that where the edge of this solenoid is placed in this hole.
- (5) Move the solenoid in the arrow direction only one pitch from the position of procedure (4), and tighten the fixing screws.

< hole for adj. aim >

< for example >

5-8-4. S Idler Solenoid Position Adjustment

- This adjustment is required only when the supply idler solenoid is replaced or removed and the REW torque does not meet the specification.

Mode: REW mode without cassette tape

Adjustment procedure:

- (1) Put the machine into REW mode without cassette tape.
- (2) Loosen the supply idler solenoid fixing screws about 1/2 turn.
- (3) Adjust the position of the S idler solenoid so that 0.01 ~ 0.1 mm clearance exists between the supply reel table and the FF idler.
- (4) Note the hole to be provided for adjusting aim after proceeding the procedure (3).
Confirm that where the edge of this solenoid is placed in this hole.
- (5) Move the solenoid in the arrow direction only one pitch from the position of procedure (4). Tighten fixing screws.

< hole for adj. aim >

< for example >

5-8-5. Pinch Solenoid Mounting Position Adjustment

- This adjustment is usually not required. Proceed with the following step only when the pinch solenoid is replaced or removed.

Mode: Remove the pinch solenoid block from the chassis.

Adjustment procedure:

Move the joint lever into the fully energized position (indicated by the arrow as far as it will go). Adjust the solenoid mounting position so that the outer circumference of solenoid pin meets the required specification.

5-8-6. 10 Times Picture Search Solenoid Mounting Position Adjustment

Mode: EJECT completion

Check procedure:

- (1) Put on the machine right side down.
- (2) Press the iron core of 10 times picture search solenoid, near the white pulley, into the fully energized position (indicated by the arrow with finger).
- (3) Check that the relationship between the edge of FR lever and the T tension regulator stopper notch under the FR lever meets the required specification.

Adjustment procedure:

- (1) Adjust the position of the 10 times picture search solenoid so that meets the required specification.

5-8-7. T Brake Solenoid Position Adjustment

Mode: REW mode without cassette tape

Check procedure:

Check that the relationship between the brake release arm and the brake arm meets the required specification.

Adjustment procedure:

Adjust the position of the T brake solenoid so that meets the required specification.

5-8-8. S Brake Solenoid Position Adjustment

Mode: REW mode without cassette tape

Check procedure:

Check that the relationship between the brake release arm and the brake arm meets the required specification.

Adjustment procedure:

Adjust the position of the S brake solenoid so that meets the required specification.

5-9. CASSETTE-UP COMPARTMENT ADJUSTMENT

- The cassette-up compartment has two photo-electrical switches. The on/off timing of these switches are adjusted as follows.

5-9-1. Cassette-in Switch Position Adjustment

Tool and equipment:

KCA type cassette tape.
Tester.
Thickness gauge.

Preparation:

- Remove the cassette-up compartment from the chassis.
- Connect the plug of the harness for cassette-up compartment and the terminal on the CC-9 board with the jumper leads.

plug of harness (CN1)	terminal on CC-9 board
4pin (5 V) ←	4pin/CN1
5 or 2pin (GND) ←	5 or 2pin/CN1

- Turn POWER on.

Check procedure:

- (1) Connect the tester to ② terminal on CC-9 board.
- (2) Insert a KCA type cassette tape slowly.
- (3) Check that the clearance between the front side of the cassette tape and the bracket of cassette-up compartment meets the required specification when the tester is turned "H" level (about 5 V).

Adjustment procedure:

- (1) Adjust the position of the cassette-in switch in the arrow direction so that meets the required specification.

Adjusting procedure;

Insert a 3.3 mm thick thickness gauge between cassette tape and bracket. Adjust the position of the cassette-in switch so that the tester is turned to "H" in this position.

5-9-2. Cassette-down Switch Position Adjustment**Tool and equipment:**

Tester

Preparation

- (1) Remove the cassette-up compartment from the chassis.
- (2) Connect the plug of the harness for cassette-up compartment and the terminal on CC-9 board with the jumper leads.

plug of harness (CN1)	terminal on CC-9 board
4pin (5 V) ←	4pin/CN1
5 or 2pin (GND) ←	5 or 2pin/CN1

- (3) Turn POWER on.

Check procedure:

- (1) Connect the tester to ⑤ terminal on CC-9 board.
- (2) Turn the white colored gear on the right side of the cassette-up compartment in the clockwise direction.
- (3) Check that the clearance between the roller and the guide meets the required specification.

Adjustment procedure:

- (1) Adjust the position of the cassette-down switch in the arrow direction so that meets the required specification.

Adjusting procedure;

Turn the gear on the right side so that the clearance between the roller and the guide is 2.2 mm clearance. Adjust the position of the cassette-down switch so that the tester is turned to "H" in this position.

5-10. LEAF SPRING POSITION ADJUSTMENT

Check procedure:

- (1) Turn on POWER. Put the machine into the EJECT mode after put into the PLAY mode once.
- (2) Turn the gear box pulley with finger so that the edge of the T drawer arm is placed into the center of the shaft as shown in figure.
- (3) Check that the relationship between leaf spring and pinch roller shaft meets the required specification 1.
- (4) Put the machine into the EJECT completion mode. Check that the clearance between leaf spring and pinch roller.

Adjustment procedure:

- (1) Adjust the position of the leaf spring so that meets the required specifications.

Spec. 1:

Tip of the leaf spring is placed between the shaft and the outer surface of the boss.

Spec. 2:

Clearance (a) should exist.

5-11. PINCH LEVER RIGHT ANGLE ADJUSTMENT

This adjustment is precisely factory-calibrated before shipment so that no adjustment is required except the pinch lever and the capstan shaft replacement.

Tool : Pinch lever adjustment jig

Mode : EJECT completion

Check procedure:

- (1) Install the pinch lever adjustment jig taking care not to give scar on the capstan.
- (2) Push the pinch lever until V-shaped ditch of the pinch lever contacts the semicylindrical portion of the jig lightly. Check that the two lamps of the jig light at the same time.

Adjustment procedure:

- (1) Loosen the two fixing screws of the pinch lever and adjust the V-shaped ditch to the correct position.
- (2) After this adjustment, tighten the fixing screws and check again.

SECTION 6

BACK TENSION AND TORQUE ALIGNMENT

6-1. BRAKE SYSTEM ADJUSTMENT

6-1-1. S Brake Torque Adjustment

Tool and equipment:

Reel table torque measurement tape
(100 mm dia.)
Tension scale (200 g full scale).

Mode: EJECT completion/POWER off.

Check procedure:

- (1) Grasp the top of the supply reel table with finger. Check that the clearance between the brake arm and the lining holder meets the required specification (1) as shown in figure as it is turned clockwise direction approx. 30 degrees.
- (2) Install the jig tape on the supply reel table and hook a tension scale on an end of the jig tape. Pull out the tape at the constant speed of approx. 9.5 cm/sec. in the arrow direction. Check that the scale reading meets the required specification (2).

Adjustment procedure:

For spec. 1

- (1) Bend the brake block shaft toward the reel table or the opposite direction with finger.

For spec. 2

- (2) Clean the surface of the reel table with cloth moistened with cleaning fluid.
- (3) If the scale reading does not meet the specification (2), replace the lining holder and check again.
- (4) If not in step (2), replace the reel table and check again.

6-1-2. T Brake Torque Adjustment

Tool and equipment:

Reel table torque measurement tape
(100 mm dia.)
Tension scale (200 g full scale).

Mode: EJECT completion/POWER off.

Check procedure:

- (1) Grasp the top of the take-up reel table with finger. Check that the clearance between the brake arm and the lining holder meets the required specification (1) as shown in figure as it is turned clockwise direction approx. 30 degrees.
- (2) Install the jig tape on the take-up reel table and hook a tension scale on an end of the jig tape. While pushing the T tension regulator arm to the left as far as it will go, pull out the tape at the constant speed of approx. 9.5 cm/sec. in the arrow direction. Check that the scale reading meets the required specification (2).

Adjustment procedure:

For spec. 1

- (1) Bend the brake block shaft toward the reel table or the opposite direction with finger.

For spec. 2

- (2) Clean the surface of the reel table with cloth moistened with cleaning fluid.
- (3) If the scale reading does not meet the specification (2), replace the lining holder and check again.
- (4) If not in step (2), replace the reel table and check again.

Spec. 1:
 $0.6 \text{ mm} \leq a \leq 1.0 \text{ mm}$

Spec. 2:
100 g ~ 170 g (on scale)
(500 g.cm ~ 850 g.cm)

6-1-3. REW Brake Torque Adjustment

Tool and equipment:

Reel table torque measurement tape
(100 mm dia.)
Tension scale (50 g full scale)

Mode: REW

Check procedure:

- (1) Install the jig tape on the take-up reel table and hook a tension scale on an end of the jig tape.
- (2) Put the machine into the REW mode. Pull out the tape at the constant speed of approx. 9.5 cm/sec. in the arrow direction. Check that the scale reading meets the required specification.

Adjustment procedure:

- (1) If the scale reading does not meet the specification, replace the R brake ass'y and check again.
- (2) If not in step (1), replace the reel table and check again.

6-2. FF/REW TORQUE ADJUSTMENT

- It is required that the sec. 5-8-3 T idler solenoid position adj. and sec. 5-8-4 S idler solenoid position adj. are checked to be correct or properly adjusted before initiating this adjustment.

Tool and equipment:

Reel table torque measurement tape
(100 mm dia.)
Tension scale (500 g full scale).

Mode: FF and REW

Check procedure:

FF torque

- (1) Install the jig tape on the take-up reel table and hook a tension scale on an end of the tape. Pull out the tape.
- (2) Put the machine into FF mode. Let the tape pulled at the constant speed of approx. 9.5 cm/sec. check that the scale reading meets the required specification.

REW torque

- (3) Install the jig tape on the supply reel table and hook a tension scale on an end of the tape. Pull out the tape.
- (4) Put the machine into the REW mode. Let the tape pulled at the constant speed of approx. 9.5 cm/sec. Check that the scale reading meets the required specification.

Adjustment procedure:

Both FF torque and REW torque are adjusted by the following adjustment procedures.

- (1) Clean the surface of the reel table, FF idler and belt with cloth moistened with cleaning fluid. Check the torque again.
- (2) If not in step (1), put the machine into FF or REW mode without cassette and check that the dc voltage at the terminals of dc motor is $10.5\text{ V} \pm 1.5\text{ V}$ in the FF or REW mode. If the dc voltage is out of spec., check that the circuit operation of MR board operates correctly.
- (3) If not in steps (1) and (2), replace the reel table, FF idler and belt.

6-3. FWD TORQUE ADJUSTMENT

Mode: FWD/FWD search

Check procedure:

- (1) Install the KCS-20 cassette tape at the tape end portion.
- (2) Put the machine into the FWD mode. Check that the relationship between the T tension regulator arm and cassette tape meets the required specification.
- (3) Install the KCA-60 cassette tape at the tape end portion.
- (4) Put the machine into x5 FWD search mode.
- (5) Check that the tape runs without slack around the T tension regulator arm.
- (6) Push the T tension regulator arm to the left as far as it will go, check that the tape slack is occurred around the T tension regulator arm.

Adjustment procedure:

- (1) Adjust RV-1 on MR-6 or MR-11 board meets the required specification in FWD mode.
- (2) Confirm as check procedures (3) ~ (6).

6-4. REV TORQUE ADJUSTMENT

Mode: REV (about x1) mode

Check procedure:

- (1) Install the KCS-20 cassette tape at the tape top portion.
- (2) Put the machine into REV mode.
- (3) Check that the relationship between the boss of S tension regulator and the bracket of erase head base meets the required specification.

Adjustment procedure:

- (1) Adjust RV-2 on MR-6 or MR-11 board meets the required specification.

6-5. FF BACK TENSION ADJUSTMENT

- It is required that the sec. 5-6-3 supply tension regulator operating position adj. is checked to be correct or properly adjusted before initiating this adjustment.
- It is required that the sec. 6-6 FWD back tension adj. is performed after this adjustment.

Tool and equipment:

Back tension adjustment jig.
Reel table torque measurement tape
(100 mm dia.)
Tension scale (50 g full scale)

Preparation:

- (1) Turn POWER on in FR-STOP mode.
(When POWER on, the S drawer roller moves to the FR-STOP position and put the machine into FR-STOP mode automatically.)
- (2) Turn the pulley of gear box block in the clockwise direction viewing from the front panel with finger so that the S drawer roller places in front of the CTL PB head.
- (3) Install the back tension adjustment jig.
- (4) Install the jig tape on the supply reel table and thread the tape as shown in figure. Check that the tape does not curl at the flange of S drawer roller.
- (5) Turn the pulley in opposite direction in step 2) so that the S drawer roller is engaged with the S holder.
- (6) Hook a tension scale on an end of tape.

Check procedure:

- (1) Press the FF button and put into FF mode.
- (2) Pull out the tape at the constant speed of approx. 9.5 cm/sec. in the arrow direction.
Check that the scale reading meets the required specification.

Adjustment procedure:

- (1) Adjust the position of the spring holder meets the required specification with flat blade screwdriver, 3 mm dia.
- (2) Check that the scale reading meets the required specification once refer to the check procedure.
- (3) Perform sec. 6-6 FWD back tension adjustment.

6-6. FWD BACK TENSION ADJUSTMENT

- It is required that the sec. 5-6-3 supply tension regulator operating position adj. and sec. 6-5 FF back tension adj. are checked to be correct or properly adjusted before initiating this adjustment.

Tool and equipment:

Back tension adjustment jig.
Reel table torque measurement tape
(100 mm dia.)
Tension scale (100 g full scale)

- Preparation:**
- (1) Push the skew arm in the arrow direction.
 - (2) Turn on the POWER and put the machine into the FR-STOP mode. (When turn on the POWER, the S drawer roller moves to the FR-STOP position and put the machine into the FR-STOP mode automatically.)
 - (3) Turn the pulley of gear box block in the clockwise direction viewing from the front panel with finger so that the S drawer roller places in front of the CTL PB head.
 - (4) Install the back tension adjustment jig.
 - (5) Install the jig tape on the supply reel table and thread the tape as shown in figure.
Check that the tape does not curl at the flange on S drawer roller.
 - (6) Turn the pulley in opposite direction in step (3) so that the S drawer roller is engaged with the S holder.
 - (7) Hook a tension scale on an end of tape.

Check procedure:

- (1) Press the PLAY button and put into PLAY mode.
- (2) Pull out the tape at the constant speed of approx. 9.5 cm/sec. in the arrow direction.
Check that the scale reading meets the required specification.

Adjustment procedure:

- (1) Select the proper spring hook of the skew arm B so that the scale reading meets the required specification.
- (2) After this adjustment, check again refer to check procedure.

SECTION 7

TAPE RUN ALIGNMENT

7-1. FF/REW MODES TAPE PATH ADJUSTMENT

Mode: FF and REW

Check procedure:

- (1) Install KCA-60 cassette tape (use the middle portion of the tape). Put the machine into REW mode.
- (2) Observe the surface of the running tape very carefully around T drawer arm. Check that the tape tension is exactly equal at the tape top and tape bottom. (Spec. 1)
- (3) Check that the tape runs without curl at the upper or lower flange of S drawer roller in the REW mode. (Spec. 2)
- (4) Put the machine once into the STOP mode, and put into the REW mode. Check that the tape runs without curl at the S drawer roller in the moment of just after the REW mode. (Spec. 3)
- (5) Put the machine into FF mode. Check that the tape runs without curl at the S drawer roller and T drawer arm in the moment of just after the FF mode. (Spec. 4)
- (6) Put the machine into FWD mode. Check that the top of the correct guide pin does not contact with the tape and drum. (Spec. 5)

Adjustment procedure:

Spec. 1

- (1) Adjust the slantness of T drawer arm by turning the T drawer arm adjusting screw.

Spec. 2

- (2) Bend the bottom of the correct guide with pliers in the arrow direction.

Spec. 3

- (3) Fine bend the bottom of the correct guide with pliers to satisfies the spec. 2) and 3).

Spec. 4

- (4) Fine adjust the slantness of the T drawer arm by turning the T drawer arm adjusting screw to satisfies the spec. 1) and 4).

Spec. 1.

good

no good

no good

TAPE RUN

7-2. T CORRECTION GUIDE SLANTNESS ADJUSTMENT

Check procedure:

- (1) Install KCA-60 cassette tape, and put the machine into the FR-STOP mode.
- (2) Press the PLAY button. The threading operation starts. Turn off the POWER when the pinch roller is pathed in front of the T correction guide.
- (3) Check that the clearance between the tape top edge and the upper bracket of T correction guide meets the required specification.

Adjustment procedure:

- (1) Adjust the position of T correction guide with flat blade screwdriver 3 mm dia. meets the required specification.
- (2) After this adjustment, perform sec. 7-3 FWD mode tape path adjustment (1).

7-3. FWD MODE TAPE PATH ADJUSTMENT (1)

- It is required that the sec. 7-2 T correction guide slantness adj. and sec. 7-1 FF/REW modes tape path adj. are checked to be correct or properly adjusted before initiating this adjustment.

Mode: FWD

Check procedure:

- (1) Install KCA-60 cassette tape (after the KCA-60 tape has run after 30 minutes). Put the machine into FWD mode.
- (2) Check that the tape runs without curl at the upper or lower flange of T drawer arm. (Spec. 1)
- (3) Check that the tape tension is exactly equal at the tape top and tape bottom, and the tape runs without curl at the lower flange of T drawer arm. (Spec. 2)

Adjustment procedure:

Spec. 1

- (1) Adjust the height of T drawer arm by turning the T drawer arm height adjusting screw.

Spec. 2

- (2) Adjust the T correction guide in the arrow direction by adjusting screw.

7-4. FWD MODE TAPE PATH ADJUSTMENT (2)

Mode: FWD

Check procedure:

- (1) Install KCA-60 cassette tape (use the middle portion of the tape). Put the machine into FWD mode.
- (2) Check to see carefully two positions indicated by the * mark in figure, check that the tape tension is exactly equal at the tape top and tape bottom. (Spec. 1)
- (3) Check that the clearance between the lower flange of threading roller and the tape bottom edge meets the required specification (2).

Adjustment procedure:

- (1) Loosen the fixing screw in the bottom of the threading roller as shown in figure.
- Spec. 1
- (2) Adjust the slantness of the threading roller by turning the slantness adjusting screw.
- Spec. 2
- (3) Adjust the height of the threading roller by turning the threading roller shaft.
- (4) Check again that the slantness and height meets the required specification 1) and 2).

Spec. 2:
 $0.01 \text{ mm} \leq \textcircled{a} \leq 0.15 \text{ mm}$

7-5. REV MODE TAPE PATH ADJUSTMENT

Check procedure:

- (1) Install KCA-60 cassette tape (use the middle portion of the tape). Put the machine into FWD mode.
- (2) Put the machine into REV (x5) mode. Check that the tape runs in contact with the lower flange of the threading roller without curl.
- (3) Put the machine into FWD (x5) mode. Check that the clearance between the lower flange of the threading roller and the tape bottom edge meets the required specification and the tape does not curl at the lower or upper flange of TG-IV.

Adjustment procedure:

- (1) Fine adjust the height of the threading roller by turning the threading roller shaft.
- (2) After this adjustment, perform sec. 7-4 FWD mode tape path adjustment (2).

< REV (x5) >

Spec.:
The tape runs in contact with \textcircled{a} portion without curl.

< FWD (x5) >

Spec.:
 $0.01 \text{ mm} \leq \textcircled{a} \leq 0.15 \text{ mm}$

7-6. TAPE PATH ADJUSTMENT AROUND PINCH ROLLER

7-6-1. Tape Wrinkle Remove Adjustment

- The first priority of this adjustment is to remove the tape wrinkle around the pinch roller, happening in the moment of just after the pinch roller pressing against the capstan.
- If the tape wrinkle is generated, perform sec. 7-6-2 pinch roller slantness adjustment at first. After this adjustment performed, fine adjust this adjustment once again.

Check procedure:

- (1) Install KCA-60 cassette tape at the tape top portion.
- (2) Put the machine into FWD (x1) mode, REV (x5) mode, repeat REV (x5) and FWD (x5) mode, PAUSE ON/OFF mode in the REC mode, and PAUSE ON/OFF mode in the playback mode. Check that the tape wrinkle does not appear or disappear within specified time when the tape runs toward the specified direction in these modes.

Adjustment procedure:

- (1) Perform sec. 7-6-2 pinch roller slantness adjustment.
- (2) Check the tape wrinkle refer to check procedure. If not, bend the pinch roller arm.

7-6-2. Pinch Roller Slantness Adjustment

Mode: Threading completion mode without cassette tape.

Check procedure:

- (1) Remove the pinch roller pre-set bracket.
- (2) Put the machine into the threading completion mode without cassette tape. Turn POWER off.
- (3) Push lightly the * marked portion of the pinch lever in the arrow direction with finger.
- (4) When the upper or lower section of the pinch roller came into contact with the capstan shaft. Check that the clearance between the lower or upper section of the pinch roller and the capstan shaft meets the required specification (1).
- (5) Push lightly the * marked portion of the pinch lever in the arrow direction with finger.
Just before the pinch roller comes into contact with the capstan shaft, check that the upper section of the pinch roller does not move in the "A" direction nor "B" direction as observed by eye, visually. (Spec. 2)

Adjustment procedure:

- (1) Turn POWER on. The threading ring put into the unthreading operation. Turn POWER off in the moment when the pinch roller comes in front of the audio/CTL head.
- (2) Bend the pinch roller arm.
- (3) Check that the pinch roller slantness meets the required specification referring to check procedure. If not, repeat the foregoing step 2) until the specification 1) and 2) are met.
- (4) Install the pinch roller pre-set bracket, and perform sec. 5-4-2 pinch roller pre-set adj.

7-7. 10 TIMES PICTURE SEARCH · TAPE PATH ADJUSTMENT

Mode: —10 times picture search
(This mode is set up by using RM-440. If RM-440 is not available, refer to sec. 2-8.)

Check procedure:

- (1) Install KCA-60 cassette tape (after the KCA-60 tape has run after 30 minutes).
- (2) Put the machine into —10 times picture search mode.
- (3) Check that the tape runs in contact with the lower flange of the threading roller without curl and the tape does not curl at the lower and upper flanges of TG-IV.

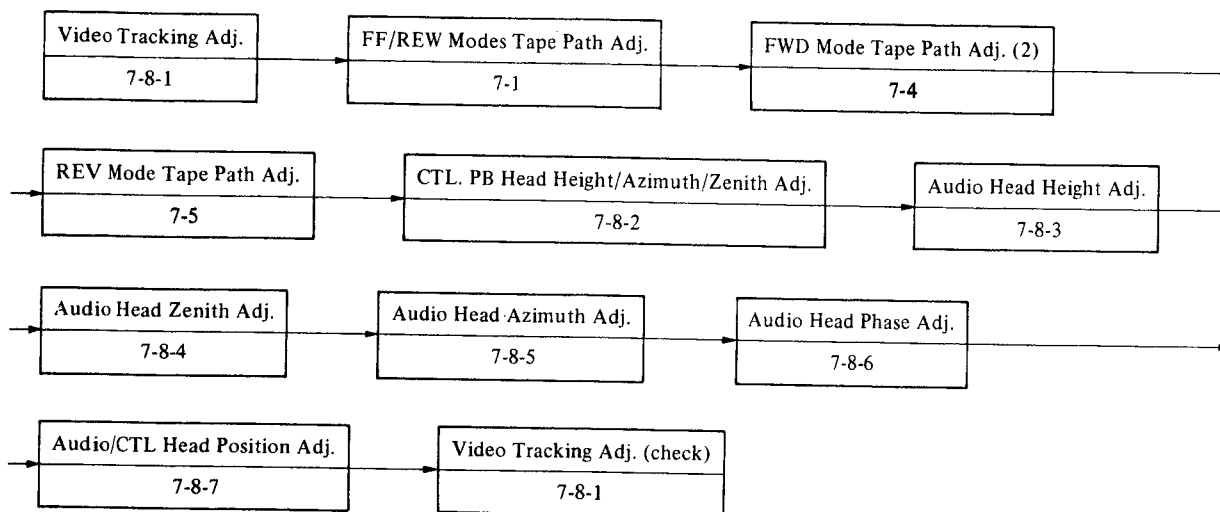

Adjustment procedure:

- (1) Bend the pinch roller arm.

7-8. TRACKING ADJUSTMENT

The tracking adjustment is required to be performed as following steps.

7-8-1. Video Tracking Adjustment

Tool and equipment:

Alignment tape, RR5-2SC-PAL
Flatness plate
Oscilloscope

- Preparation:**
- (1) Connect the oscilloscope to TP18/RP-8 board, and EXT.TRIG. from TP14/RP-8 board.
 - (2) Play back the color-bar segment of alignment tape.

Check procedure:

- (1) While observing the waveform on the scope, turn the TRACKING control in both directions noting that the RF waveform maintains a flat envelope while the amplitude increases and decreases.
- (2) Adjust the TRACKING control so that the RF envelope is just before starting to decrease. Check that the RF envelope fluctuation and head-to-tape contact are within the specification.

Adjustment procedure:

- When the video tracking adjustment is performed, the drum entrance side tape guide's height adjustment is usually not required. But when this guide (TG-II) is replaced or removed, adjust the height of this guide so that the tape runs at the center of this guide without tape runs in contact with upper or lower flange.

Spec.:

< head to tape contact >

$$\frac{B}{A} \geq 0.70 \quad \frac{C}{A} \geq 0.70$$

< fluctuation >

$$\frac{D}{A} \geq 0.90$$

- S drawer roller unit has three adjusting screws. These three adjusting screws functions as follows.

(i) Slantness adjusting screw (a)
Turning this screw in the clockwise direction, the upper section of S drawer roller slants in the arrow "A" direction.

(ii) Slantness adjusting screw (b)
Turning this screw in the counter clockwise direction, the upper section of S drawer roller slants in the arrow "B" direction.

The RF envelope meets the required specification but tape runs curl at upper flange of S drawer roller, this screw is only used in this manner to remove tape curl.

(iii) Height adjusting screw
Turning this screw in the clockwise direction, makes the height of S drawer roller lower.

- When the drum exit side tape guides (TG-III, TG-IV) adjustment are performed, loosen the locking screw 1 ~ 2 turns and adjust the height by turning the height adjusting nut.

- When the tracking at the drum's input side is no good.

- (1) Set the TRACKING control so that the RF envelope amplitude is made to 70 ~ 80% of the maximum amplitude.
- (2) Adjust height and slantness of S drawer roller by turning the height adjusting screw and slantness adjusting screw (a) so that the RF envelope is flat.

(CAUTION)

- (i) Observe the surface of the running tape very carefully around S drawer roller. Check that the tape tension is exactly equal at the tape top and tape bottom.
 - (ii) Check that the tape runs in contact with the upper flange of S drawer roller without tape curl.
- When the tracking at the drum's center portion is no good. It is required that the drum's input side tracking adjustment to be correctly adjusted before initiating this adjustment.
 - (3) Set the TRACKING control so that the RF envelope amplitude is made to 70 ~ 80% of the maximum amplitude.
 - (4) Adjust height and slantness of S drawer roller by turning the height adjusting screw and slantness adjusting screw (a) so that the RF envelope is flat.

(TG-III)
(TG-IV)

< drum entrance side >

(CAUTION)

- (i) Adjust the slantness adjusting screw (a) in the clockwise within 10 degrees.
- (ii) When the drum's center portion tracking adjustment performs, the drum's input side tracking must maintain to flat.
- (iii) Check that the tape runs in contact with the upper flange of S drawer roller without tape curl.
- (5) When the RF envelope is not flat with step 4), adjust height of TG-III and TG-IV.
- (6) When the RF envelope is not flat with steps 4) and 5), adjust zenith of the audio/CTL head within the allowable range. Adjust height of TG-III and TG-IV once again.
- (7) Check that the clearance between the tape bottom edge and the lower flange of threading roller is 0.01 mm ~ 0.15 mm clearance. If not, perform height adjustment of threading roller by turning the threading roller shaft.

< zenith adj. for audio/CTL head >

- When the tracking at the drum's exit side is no good.
- (8) Set the TRACKING control so that the RF envelope amplitude is made to 70 ~ 80% of the maximum amplitude.
 - (9) When the RF envelope is not flat as shown in figure 1, adjust height of TG-IV so that the RF envelope is flat. After this adjustment, adjust height of TG-III so that the tape runs in contact with upper flange. When the RF envelope is not flat as shown in figure 2, adjust height of TG-III and TG-IV so that the RF envelope is flat. If it does not with this adjustment, adjust the zenith of the audio/CTL head within the allowable range. Adjust the height of TG-III and TG-IV.
 - (10) Check that the clearance between the tape bottom edge and the lower flange of threading roller is 0.01 mm ~ 0.15 mm clearance. If not, perform height adjustment of threading roller by turning the threading roller shaft.

< drum exit side >

7-8-2. CTL PB Head Height/Azimuth/Zenith Adjustments

- CTL PB head height, azimuth, and zenith adjustments are closely related. If any one of these three adjustments is attempted, perform the rest of two adjustments at the same time.

Tool and equipment:

Flatness plate

Check procedure:

- Check that at the top and bottom clearances between erase head and TG-I meets the required specification. (Spec. 2: Azimuth check)
- Check that the clearance between the erase head and flatness plate meets the required specification, when the flatness plate set on the erase head and TG-I. (Spec. 3: Zenith check)
- Install a cassette tape, and put the machine into FWD mode.
- Check that the relationship between the top edge of tape and CTL PB head meets the required specification. (Spec. 1: Height check)

Adjustment procedure:

- Adjust the adjusting screw (a) meets the required specification (2).
- Adjust the adjusting screw (b) meets the required specification (3).
- Turn three adjusting screws of exactly equal amount in clockwise or counterclockwise direction so that the relationship between tape and head meets the required specification (1).

Spec.:
(height)
 $0.02 \text{ mm} \leq \textcircled{a} \leq 0.4 \text{ mm}$

Spec.:
(azimuth)
 $\textcircled{a} \div \textcircled{b}$

Spec.:
(Zenith)
 $a \leq 0.1 \text{ mm}$

7-8-3. Audio Head Height Adjustment

Tool and equipment:

Alignment tape, RR5-2SC-PAL
VTVM or oscilloscope

Preparation:

- (1) Connect the VTVM or oscilloscope to AUDIO OUT CH-1 and CH-2 terminals.
- (2) Playback the audio 1 kHz segment of the alignment tape.

Check procedure:

- (1) Check that the CH-1 output level increase is less than 0.5 dB when pressing down at (A).
If not, perform the steps (1) and (2) of the adjustment procedure.
- (2) Check that the CH-2 output level increase is less than 0.5 dB when pushing up at (B).
If not, perform the steps (3) and (4) of the adjustment procedure.

Adjustment procedure:

- (1) Loosen the locking screw and turn adjusting screws (R) and (A) of exactly equal amount in counter-clockwise direction and turn adjusting screw (C) of exactly equal amount in clockwise direction.
- (2) Tighten the locking screw and check height again.
- (3) Loosen the locking screw and turn adjusting screws (R) and (A) of exactly equal amount in clockwise direction and turn the screw (C) of exactly equal amount in counter-clockwise direction.
- (4) Tighten the locking screw and check height again.

Spec.:

- * CH-1 level increase is less than 0.5 dB when pressing down at (A) portion.
- * CH-2 level increase is less than 0.5 dB when pushing up (B) portion.

7-8-4. Audio Head Zenith Adjustment

Tool and equipment:

Flatness plate

Check procedure:

Check that the clearance between the audio head and the flatness plate meets the required specification, when the flatness plate is set on the audio head and TG-III.

Adjustment procedure:

When the clearance is out of spec. at the top portion of the audio head.

- (1) Turn the adjusting screw (R) in counterclockwise direction.
- (2) Tighten the locking screw and check zenith again.

When the clearance is out of spec. at the bottom portion of the audio head.

- (3) Loosen the locking screw $\frac{1}{4} \sim \frac{1}{2}$ turns.
- (4) Turn the adjusting screw (R) in clockwise direction.
- (5) Tighten the locking screw and check zenith again.

7-8-5. Audio Head Azimuth Adjustment

Tool and equipment:

Alignment tape, RR5-2SC-PAL
 VTVM or oscilloscope

- Preparation:**
- (1) Connect the VTVM or oscilloscope to AUDIO OUT CH-1 or CH-2 terminal.
 - (2) Playback the audio 10 kHz portion of the alignment tape.

Adjustment procedure:

- (1) Loosen the locking screw and adjust the maximum output level by turning the adjusting screw.
- (2) Tighten the locking screw.

7-8-6. Audio Head Phase Adjustment

Tool and equipment:

Alignment tape, RR5-2SC-PAL
Oscilloscope

- Preparation:**
- (1) Connect the horizontal and vertical terminals of the oscilloscope to AUDIO OUT CH-1 and CH-2 terminals.
 - (2) Playback the audio 1 kHz portion of the alignment tape.
 - (3) Adjust the scope for horizontal and vertical amplitudes of 6 cm of a lissajous waveshape.

Check procedure:

Check that the vertical amplitude at the center in the horizontal direction is within the specification at 1 kHz and 10 kHz.

Adjustment procedure:

- (1) Loosen the locking screw $\frac{1}{4} \sim \frac{1}{2}$ turns and adjust the phase by turning the adjusting screw.
- (2) Tighten the locking screw and confirm phase again.

7-8-7. Audio/CTL Head Position Adjustment

- The video head track width of this set is $105\mu\text{m}$, but the recorded video track width on the alignment tape is $85\mu\text{m}$. Therefore this CTL head position adjustment of this set is not perfect from the ordinary U-matic VTR's adjustment. Be sure to perform the following check/adjustment steps.

Tool and equipment:

Alignment tape, RR5-2SC-PAL
Oscilloscope

- Preparation:**
- (1) Connect the oscilloscope to TP18/RP-8 board, TP2/SV-47 board, EXT.TRIG. from TP11/SV-47 board.
 - (2) Playback the color bar segment of the alignment tape.

Check procedure:

- (1) Set the TRACKING control to its center click (detent) position.
- (2) Turn the TRACKING control in counterclockwise direction until the waveform at TP18/RP-8 board is just before starting to decrease from the maximum amplitude, check that the waveform at TP2/SV-47 advances 1.2 ± 0.3 msec. from the step (1) position.
- (3) Turn the TRACKING control in clockwise direction until the waveform at TP18/RP-8 board is just before starting to decrease from the maximum amplitude, check that the waveform at TP2/SV-47 is delayed. 1.2 ± 0.3 msec. from the step (1) position.

Adjustment procedure:

- (1) Turn the TRACKING control in counterclockwise direction until the waveform at TP18/RP-8 advance 1.2 msec. from the step (1) position of check procedure.
- (2) Loosen the three fixing screws.
- (3) Move the CTL head block toward the capstan shaft as far as it will go, and install the flatblade screwdriver as shown in figure. Move the screwdriver in the arrow direction. Stop the movement of the screwdriver when the RF envelope waveform just turn into the maximum amplitude.
- (4) Check the CTL head position meets the specifications according to steps (2) and (3) of check procedure.
- (5) Tighten the fixing screws of the CTL head block.
- (6) Check again that the CTL head position meets the specifications.

7-9. VIDEO HEAD DIHEDRAL ADJUSTMENT

Tool and equipment:

Dihedral adjusting screw
Alignment tape, RR5-2SC-PAL
Video monitor

Check procedure:

Check that the vertical line beneath the switching point. If the vertical line does not split into two lines, no adjustment is necessary.

Adjustment procedure:

- (1) Screw lightly four dihedral adjusting screws into the upper drum.
- (2) Turn either of the two screws adjacent to the video head with white leads until some resistance is felt.
- (3) If this screw is turned further, the video head is moved and the dihedral is adjusted. Therefore, turn this screw an additional quarter turn.
- (4) Check for dihedral distortion. If the distortion has gotten worse, turn this screw back one turn and tighten the other screw a quarter turn. Check again for dihedral distortion and continue in this way until dihedral error is eliminated.
- (5) When the adjustment is completed, remove the four dihedral adjusting screws. After removal, playback the alignment tape and check dihedral again as error sometimes reappears after screws are removed.

SECTION 8

POWER SUPPLY AND SYSTEM CONTROL ALIGNMENT

8-1. REG +12V ADJUSTMENT(SWITCHING REGULATOR)

.More than 5 minutes should be elapsed after POWER ON.
.Any mode.

Check point; CN201-1/UR-02

Spec: 12.0V+0.1Vdc

Adj: RV301/C(UR-02)

NOTE: If the REG 12V adjustment is attempted, re-alignment of the video system and servo system are required.
Do not attempt adjustment to REG 12V power supply unless machine performance is obviously poor due to incorrect power supply voltage.
If adjustments are made to the power supply, re-alignment of the video and servo systems are necessary.

C Board in UR-02

M Board in UR-02

8-2. REG +9V ADJUSTMENT

.POWER ON.
.STOP mode.

Check point: TP73/DC-10E

Spec: $9.0V \pm 0.1V_{dc}$

Adj: RV71/DC-10E

8-3. DIGITAL VCC +5V ADJUSTMENT FOR SERVO

.More than 5 minutes should be elapsed after POWER ON.
.STOP mode.

Check point: TP37/SV-47A

Spec: $5.0V \pm 0.1V_{dc}$

Adj: RV17/SV-47A

DC-10E Board

SV-47A Board

8-4. REG +5V ADJUSTMENT FOR SYSTEM CONTROL

.FWD mode.

Check point: TP2/SY-68C

Spec: $5.2V \pm 0.05V_{dc}$

Adj: RV1/SY-68C

8-5. TAPE SENSOR BALANCE ADJUSTMENT

.STOP mode (Cassette up position).

.Short between CN13-2 and CN13-3 on SY-68C board
with jumper lead.

Check point: TP11/SY-68C

Spec: $6.0V \pm 0.2V_{dc}$

Adj: RV2/SY-68C

POWER AND SYSTEM

SY-68C Board

SECTION 9
SERVO SYSTEM ALIGNMENT

[Equipment Required]

- Alignment Tape; RR5-2SA-PAL (Part No. 8-960-015-63) or RR5-2SC-PAL (Part No. 8-960-035-61) or RR5-1S-PAL (Part No. 8-960-015-61).

Spec;

TP30/SV-47A

Adj; RV11/SV47A

9-8. CAPSTAN SEARCH $\times 1/2$ SPEED ADJUSTMENT

- .Playing back the audio 3KHz segment of Alignment Tape RR5-2SC PAL.

Check point; TP35/SV-47A

Spec; Adjust RV16/SV47A so that the transtion point of level
change from LOW level to HIGH level.

Adj; RV16/SV-47A

9-9. CAPSTAN FWD/REV DETECTOR ADJUSTMENT

- .Playing back the Alignment Tape RR5-2SC PAL.
- .Set the TRACKING control to its center detent.

Check point; TP33/SV-47A

Trig; TP33/SV-47A(INT)

Spec;

TP33/SV-47A

$$A \div B$$

Adj; RV14/SV-47A

9-10. DRUM AFC BIAS ADJUSTMENT

.Playing back the Alignment Tape RR5-2SC PAL.
.FWD and SEARCH STILL modes.
.Set the TRACKING control to its center detent.

Check point; TP6/SV-47A(INT)

Trig; TP6/SV-47A(INT)

Spec;

Adj; RV8/SV-47A

NOTE: Repeat the sequence of
adj--SEARCH STILL mode--FWD mode(phase check)
until required specification is met.

9-11. DRUM AFC TRANSIENT ADJUSTMENT

.Playing back the Alignment Tape RR5-2SC PAL.
.FWD and SEARCH STILL modes.
.Set the TRACKING control to its center detent.

Check point; TP7/SV-47A

Spec; SEARCH STILL mode=(REF)
FWD mode=(REF)+0.1Vdc

Adj; RV5/SV-47A

NOTE: Repeat the sequence of
adj--FWD STILL mode--FWD mode(level check)
until required specification is met.

9-12. DRUM LOCK PHASE ADJUSTMENT

.Playing back the color bar segment of Alignment Tape RR5-2SC PAL.
 .Short TP3 and TP6 and E1 on SV-47A board with jumper lead.

Check point; TP5 and TP11/SV-47A

Trig; TP1/SV-47A

Spec;

TP5/SV-47A
 CHOP mode
 TP11/SV-47A

Adj; RV4/SV-47A

9-13. ϕ^2 PHASE ADJUSTMENT

.VIDEO LINE IN;CCIR Video signal.
 .Short TP3 and E1 on SV-47A board with jumper lead.
 .REC mode.

Check point;TP5 and TP6/SV-47A

Trig;TP1/SV-47A

Spec;

TP5/SV-47A
 CHOP mode
 TP6/SV-47A

Adj;RV601/SV-47A

$T = 0 \pm 2\mu\text{sec}$

9-14. SWITCHING POSITION ADJUSTMENT

- .Playing back the color bar segment of Alignment Tape RR5-2SC PAL.
- .Short between TP6 and E3 on SV-47A board with jumper lead.
- .Set the TRACKING control to its center detent.

Check point; TP11/SV-47A and TP5/YC-3

Trig; TP1/SV-47A

Spec;

Adj; RV2/SV-47A(1st Field)
RV3/SV-47A(2nd Field)

9-15. PICTURE SPLITTING COMPENSATOR ADJUSTMENT

- .Playing back the Alignment Tape RR5-2SC PAL.

Check point; TP10/SV-47A

Trig; TP1/SV-47A

Spec;

TP10/SV-47A

Adj; RV6/SV-47A(PHASE)
RV7/SV-47A(LEVEL)

9-16. REEL SERVO ADJUSTMENT

9-16-1. x10 Picture Search Speed Adjustment

.Playing back the Alignment Tape RR5-2SC PAL.
.*FWD x10 Picture Search mode

Check point; TP2/SV-47A

Spec;

Adj; RV3/MR-6 or MR-11

NOTE: In x10 PICTURE Search mode, the pinch roller is apart from the capstan and the 10 times picture appears on the monitor in FWD and REV SEARCH mode.

When VTR is operated in x10 Picture Search mode, RM-440 remote controller is used.

At this time, RM-440 SEARCH DIAL is turned fully clockwise (FWD SEARCH mode) or fully counter-clockwise (REV SEARCH mode).

If RM-440 is not available, x10 picture search mode is set up as the following process.

.Temporarily connect 10kohm Resistor between IC136-4 and IC33-6 of SY-68C board.

.Unsolder between IC136-4 and IC33-6 of SY-68C board.

.Short between IC33-6 and E8 of SY-68C board with jumper lead.

.Connect 10kohm Resistor between IC134-3 and IC32-4 of SY-68C board.

.Unsolder between IC134-3 and IC32-4 of SY-68C board.

.Short between IC32-4 and E8 of SY-68C board with jumper lead.

.Short between CN32-11 and E8 of SY-68C board with jumper lead.

.Short between CN22-5 and E8 or +5V with jumper lead.

.Short between CN22-5 and E8; REV mode.

.Short between CN22-5 and +5V; FWD mode.

After x10 Picture Search Speed is adjusted, the reset circuit is made to original.

9-16-2. Still Speed Adjustment

.FWD PAUSE mode

Check point; CN6-1 and CN6-3/MR-6 or MR-11

Spec; $0.4V \pm 0.02V_{dc}$

Adj; RV4/MR-6 or MR-11

NOTE; FWD Torque Alignment(RV1/MR-6 or MR-11) and REV Torque Alignment(RV2/MR-6 or MR-11) Refer to Mechanical Alignment sec.6-3 and 6-4.

SECTION 10
AUDIO SYSTEM ALIGNMENT

[Equipment Required]

- Alignment Tape; RR5-2SA-PAL (Part No. 8-960-015-63) or RR5-2SC-PAL (Part No. 8-960-035-61) or RR5-1S-PAL (Part No. 8-960-015-61).

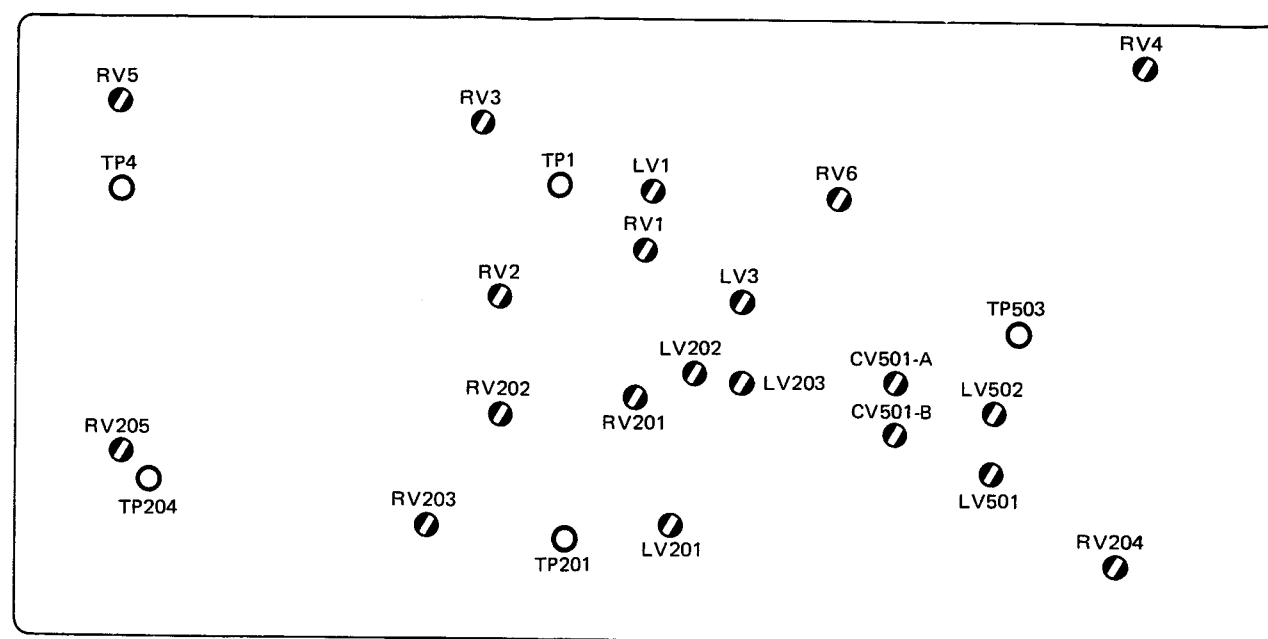

RR5-2/SA-PAL/RR5-2SC-PAL

Real Time Counter (min.)	Tape Counter	Video Track	Audio Track
00:00 – 04:00	000 – 100	Monoscope	3 KHz, 0 dB

- Blank Tape; KCA-60, KCS-20
- Oscilloscope
- Frequency Counter

AUDIO

AU-21A Board

10-1. PB OUTPUT FREQUENCY RESPONSE ADJUSTMENT

.Playing back the 1kHz and 10kHz segments of Alignment Tape.

Check Point; AUDIO LINE OUT(Terminated by 47kohm)

Spec; (1kHz Level=REF Level)
10kHz Level=(REF Level)-10dB+0.5dB

Adj; RV1/AU-21A(CH-1)
RV201/AU-21A(CH-2)

10-2. AUDIO LEVEL CONTROL SETTING/METER CALIBRATION ADJUSTMENT

.MIC IN;1kHz,-60dB
.LIMITER sw;OFF
.EE mode
.AUDIO LINE OUT (Terminated by 47kohms)-5dB+0.5dB(CH-1=CH-2)
(By AUDIO LEVEL VR)

Check Point; AUDIO METER(CH-1=CH-2)

Spec; 0dB+0.5dB

Adj; RV4/AU-21A(CH-1)
RV204/AU-21A(CH-2)

NOTE;The AUDIO LEVEL VR should not be touched until rest of Sec.10 Audio System Alignment are completed.

10-3. PB OUTPUT LEVEL ADJUSTMENT

Playing back the 10kHz segment of Alignment Tape.

Check point; AUDIO LINE OUT (Terminated by 47kohm)

Spec; -5dB+0.5dB(CH-1=CH-2)

Adj; RV2/AU-21A(CH-1)
RV202/AU-21A(CH-2)

10-4. AUDIO BIAS/ERASE FREQUENCY ADJUSTMENT

.AUDIO IN;no signal input.
.REC mode.

Check point; TP503/AU-21A

Spec: 71kHz+0.1kHz

Adj; LV501/AU-21A

10-5. AUDIO BIAS CURRENT ADJUSTMENT

.MIC IN;1kHz/10kHz,-80dB.
.REC/PB mode.

Check point; AUDIO LINE OUT (Terminated by 47kohm)

Spec;

$$\left[\begin{array}{c} 10\text{kHz} \\ \text{REC/PB Level} \end{array} \right] = \left[\begin{array}{c} 1\text{kHz} \\ \text{REC/PB LEVEL} \end{array} \right] + 0.5\text{dB}$$

Increasing the BIAS voltage by 1V(rms)
(measured at TP501/AU-21A for CH-1,TP502/AU-21A for CH-2)
corresponds to the decrease of 0.4dB of the 10kHz REC/PB level

Adj; CV501-A/AU-21A(CH-1)
CV501-B/AU-21A(CH-2)

10-6. BIAS TRAP ADJUSTMENT (REC-1)

.AUDIO IN;no signal input.
.REC mode.

Check point; TP4/AU-21A(CH-1)
TP204/AU-21A(CH-2)

Spec; Adjust for minimum signal amplitude.

Adj; LV3/AU-21A(CH-1)
LV203/AU-21A(CH-2)

10-7. BIAS TRAP ADJUSTMENT (REC-2)

.AUDIO IN;no signal input.
.REC mode.

Check point; TP1/AU-21A(CH-1)
TP201/AU-21A(CH-2)

Spec; Adjust for minimum signal amplitude.

Adj; LV1/AU-21A(CH-1)
LV201/AU-21A(CH-2)

10-8. AUDIO LIMITER GAIN ADJUSTMENT

. MIC IN;1kHz,-30dB.
. LIMITER sw;ON.
. STOP mode.

Check point; AUDIO LINE OUT(Terminated by 47kohm)

Spec; $-2\text{dB} \pm 0.5\text{dB}$ (CH-1=CH-2)

Adj; RV3/AU-21A(CH-1)
RV203/AU-21A(CH-2)

10-9. REC LEVEL ADJUSTMENT

.MIC IN;1kHz,-60dB.
.LIMITER sw;OFF
.REC and PB modes.

Check point; AUDIO LINE OUT(Terminated by 47kohm)

Spec; The self record/playback level should be $-5\text{dB} \pm 0.5\text{dB}$ (The level difference between CH-1 and CH-2 should be less than 0.5dB)

If adjustment is found to be necessary, increase or decrease the EE signal level at TP5/AU-21A(CH-1) or TP205/AU-21A(CH-2) during EE mode, by the same signal level as is found to be adjusted in the self record/playback procedure.

Adj; RV5/AU-21A(CH-1)
RV205/AU-21A(CH-2)

AUDIO

10-10. INSERT BIAS FREQUENCY ADJUSTMENT

.AUDIO IN; no signal input.
.AUDIO DUB mode(CH-1).

Check point; TP503/AU-21A

Spec; 71kHz \pm 0.2kHz

Adj; LV502/AU-21A(CH-1)

10-11. PB BIAS TRAP ADJUSTMENT

.Using a blank tape that has not been recoded audio signal.
.AUDIO DUB mode(CH-1).

Check point; TP202/AU-21A

Spec; Minimize the signal amplitude(bias leak)

Adj; LV202/AU-21A

10-12. CROSS-TALK CANCEL ADJUSTMENT

.CH-1 MIC IN;5kHz,-60dB.
.Using an audio blank tape.
.AUDIO DUB mode(CH-1).

Check point;CH-2 LINE OUT

Spec; Minimize the signal amplitude(cross-talk)

Adj; RV6/AU-21A

SECTION 11 VIDEO SYSTEM ALIGNMENT

[Equipment Required]

- Dual Trace Oscilloscope
- Frequency Counter
- Video Sweep Generator (with Burst)
- Blank Tape; KCA-60 (SONY standard product)
- Alignment Tape; RR5-2SA-PAL (Part No. 8-960-015-63) or RR5-2SC-PAL (Part No. 8-960-035-61) or RR5-1S-PAL (Part No. 8-960-015-61)

Minimize the amplitude of cross point
(cross point: 3.0 MHz ~ 3.8 MHz)

11-2-2. Drop-Out Sensitivity Level Adjustment

.Playing back the RF sweep segment of Alignment Tape RR5-2SC PAL.

Check point; TP18 and TP19/RP-8A

Trig; TP14/RP-8A

Spec;

Adj; RV13/RP-8A

11-2-3. RF-Band Noise Adjustment

.Playing back the color bar segment of Alignment Tape RR5-2SC PAL.

.SEARCH x5 REV mode.

.Preset the RV12/RP-8A Fully counterclockwise.

.SYSTEM SELECT sw;PAL

Check point;TP7/YC-3

Trig;YP7/YC-3(INT)

Spec;

$$\frac{B}{A} = \frac{2}{3}$$

Adj;RV12/RP-8A

11-2-4. Carrier Balance Adjustment

.Playing back the Monoscope segment of Alignment Tape RR5-2SC PAL.

Check point; TP3/YC-3

Trig; TP1/SV-47A

Spec;

TP3/YC-3

Minimize this amplitude

Adj; RV2/YC-3

11-2-5. Y Output Level Adjustment

.VIDEO LINE IN;PAL Color bar signal.

.Self Recod and then Playback mode.

.VIDEO LINE OUT;Terminated by 75 ohm Resistor.

Check point; TP5/YC-3

Trig; TP1/SV-47A

Spec;

TP5/YC-3

Adj; RV6/YC-3

Repeat the sequence of
Adj--Record--Playback(level check)
until required specification is met.

11-2-6. SYNC Tip Carrier Frequency Adjustment

.No signal input.
.EE mode.

Check point; TP1/RP-8A

Spec; 3.8MHz \pm 0.05MHz

Adj; RV7/YC-3

11-2-7. FM Deviation Adjustment

.VIDEO LINE IN;CCIR color bar signal.
.Self Record and then Playback mode.
.RV8/YC-3(White clip)fully counterclockwise.

Check point; TP6/YC-3(Terminated by 75 ohm Resistor)

Trig; TP1/SV-47A

Spec;

Adj; RV4/YC-3

Repeat the sequence of
Adj--Record--Playback(Sec.11-2-5; Y output level check)
until required specification is met.

11-2-8. White Clip Adjustment

.VIDEO LINE IN; CCIR color bar signal.
.EE mode.

Check point; TP6/YC-3

Trig; TP9/YC-3

Spec;

$$A : B = 2 : 1_{-2.5\%}^{+0}$$

Adj; RV8/YC-3

11-2-9. PB Y Phase Equalizer Adjustment

.Playing back the M.S/with burst segment of Alignment Tape RR5-2SC PAL.

Check point; TP3/YC-3

Trig; TP9/YC-3

Spec;

Adj; RV3/YC-3

11-2-10. REC Color Y Phase Equalizer Adjustment

.VIDEO LINE IN; CCIR Monoscope with burst.
.EE mode.

Check point; TP3/YC-3

Trig; TP9/YC-3

Spec:

Adj: RV1/YC-3

11-3. CHROMA AMPLIFIER ADJUSTMENT

11-3-1. DUB Audio Bias Trap Adjustment

.Playing back the tape that has been recorded only CTL signal.
.AUDIO DUB mode(CH-1).

Check point; TP12/RP-8A

Spec; Minimize the amplitude(audio bias leak)

Adj; LV3/RP-8A

* To record the only CTL signal onto the tape,
Short between TP1 and E2 on RP-8A board with jumper lead and
put the machine into the REC mode.

11-3-2. 4.43MHz Reference Oscillator Frequency Adjustment

.STOP mode.

.SYSTEM SELECT sw;PAL

Check point; TP13/YC-3

Trig; TP13/YC-3(INT)

Spec; 4.433631MHz₋₅Hz

Adj; CV1/YC-3

11-3-3. APC 5.12MHz Tuning Adjustment

.VIDEO LINE IN;CCIR color bar signal.

.EE mode.

.SYSTEM SELECT sw;PAL

Check point; TP12/YC-3

Trig; TP12/YC-3(INT)

Spec; Maximize the amplitude(5.119193MHz₊₁kHz)

Adj; LV2 and LV3/YC-3

11-3-4. Chroma Converter Balance Adjustment

.Playing back the color bar segment of Alignment Tape RR5-2SC PAL.

Check point; TP20/YC-3

Trig; TP9/YC-3

Spec;

TP20/YC-3

Adj; RV15/YC-3

11-3-5. ACC Burst Tuning Adjustment

.Playing back the color bar segment of Alignment Tape RR5-2SC PAL.

Check point; TP20/YC-3

Trig; TP1/SV-47A

Spec;

Adj; LV4/YC-3

11-3-6. ACC Level Adjustment

.Playing back the color bar segment of Alignment Tape RR5-2SC PAL.

Check point; TP20/YC-3

Trig; TP1/SV-47A

Spec;

Adj; RV10/YC-3

11-3-7. VCO Center Frequency Level Adjustment

.Playing back the color bar segment of Alignment Tape RR5-2SC PAL.
.COLOR LOCK sw; Center position.

Check point; TP15/YC-3

Spec; $8.1\text{V} \pm 0.1\text{Vdc}$ set to be available for the normal hue on the monitor screen.

Adj; RV9/YC-3

11-3-8. APC Gain Adjustment

.Playing back the color bar segment of Alignment Tape RR5-2SC PAL.

Check point; TP15/YC-3

Trig; TP9/TC-3

Spec;

Adj; RV11/YC-3

11-3-9. REC Chroma Frequency Response Adjustment

.VIDEO LINE IN;The Gated sweep signal with burst.
.EE mode.

Check point; TP16/YC-3

Trig; TP1/SV-47A

Spec;

Adj; LV1/YC-3

11-3-10. Chroma Mix Level Adjustment

.VIDEO LINE IN;CCIR color bar signal.
.Self Record then play back mode.
.VIDEO LINE OUT;Terminated by 75 ohm Resistor.
.SYSTEM SELECT sw;PAL

Check point; TP5/YC-3

Trig; TP9/YC-3

Spec; (white peak level)=(chroma peak level)

Adj; RV18/YC-3

11-3-11. Differential Gain Adjustment

.VIDEO LINE IN;PAL color bar signal.
.Self Record then play back mode.
.VIDEO LINE OUT;Terminated by 75 ohm Resistor.

Check point;Center pin of RV12/YC-3

Trig;TP1/SV-47A

Spec;

Adj;RV12/YC-3

11-4. RECORD AMPLIFIER ADJUSTMENT

11-4-1. Y REC Current Frequency Response Adjustment

- .VIDEO LINE IN;CCIR Video signal(B/W)
- .Short between TP1 and E2 on RP-8A board with jumper lead.
- .Connect the Sweep signal between TP3 and E2 on RP-8A board.
- .Unsolder temporarily,between TP4 and TP6 (TP7 and TP9)
on RP-8A Board.
- .REC mode.

Check point; Waveform between TP4 and TP6/RP-8A(CH-A)
TP7 and TP9/RP-8A(CH-B)

Trig;TP1/SV-47A

Spec;

Waveform between
TP4 and TP6/RP-8A
(TP7 and TP9/RP-8A)

1.0MHz	3.5MHz	4.5MHz
100% REF.	82% +3%	74% +3%

Adj; RV2(CH-A)/RP-8A
RV3(CH-B)/RP-8A

After this adjustment,solder between TP4 and TP6/RP-8A,
TP7 and TP9/RP-8A respectively.

11-4-2. Y REC Current Level Adjustment

- .VIDEO LINE IN;PAL color video signal.
- .Unsolder temporarily,between TP4 and TP6 (TP7 and TP9) on RP-8A Board.
- .REC mode.

Check point;Waveform between TP4 and TP6/RP-8A(CH-A)
TP7 and TP9/RP-8A(CH-B)

Trig; TP14/RP-8A

Spec; sync tip level

Waveform between
TP4 and TP6/RP-8A
(TP7 and TP9/RP-8A)

Adj; RV1/RP-8A

After this adjustment,solder between TP4 and TP6/RP-8A,
TP7 and TP9/RP-8A respectively.

11-4-3. Chroma REC Current Level Adjustment

- .VIDEO LINE IN;PAL color Bar signal.
- .REC mode.

Check point; TP16/YC-3

Trig; TP1/SV-47A

Spec;

TP16/YC-3

Adj; RV13/YC-3

11-5. DUB CHROMA ADJUSTMENT

11-5-1. DUB Chroma Output Level Adjustment(REC/EE)

.VIDEO LINE IN;PAL color bar signal.
.EE mode.

Check point;TP17/YC-3

Trig;TP1/SV-47A

Spec;

TP17/YC-3

Adj;RV17/YC-3

11-5-2. Chroma REC Current Adjustment

.VIDEO LINE IN;PAL color bar signal.
.Playing back the self-recorded tape.

Check point; TP18/YC-3

Trig; TP1/SV-47A

Spec;

TP18/YC-3

Adj; RV14/YC-3

Repeat the sequence of
adj--record--playback(level check)until required
specification is met.

11-5-3. DUB Chroma Output Level Adjustment(PB/DUB)

.VIDEO LINE IN;PAL color Bar signal.
.Playing back the self-recorded tape.

Check point;TP17/YC-3

Trig;TP1/SV-47A

Adj;RV16/YC-3

Repeat the sequence of
adj--record--playback(level check)until required
specification is met.

11-6. Y/CHROMA DELAY TIME ADJUSTMENT

.This adjustment is usually not necessary since Y/Chroma delay time variation among multiple recorders and players are negligibly small.
.VIDEO LINE OUT:Terminated by 75 ohm Resistor.

11-6-1. PB Y/C Delay Time Adjustment

.Playing back the MOD.20T pulse segment of Alignment Tape RR5-2SC PAL.

Check point; TP5/YC-3

Trig; TP9/YC-3

Spec;

TP5/YC-3

GOOD

NG

NG

Adj; DL1/RP-8A

VIDEO

11-6-2. REC Y/C Delay Time Adjustment

.VIDEO LINE IN; \sin^2 wave signal.
.Self Record then play back mode.

Check point; TP5/YC-3

Trig; TP9/YC-3

Spec;

TP5/YC-3

GOOD

NG

NG

Adj; DL1/YC-3

Repeat the sequence of
Adj--Record--Playback(waveform check)
until required specification is met.

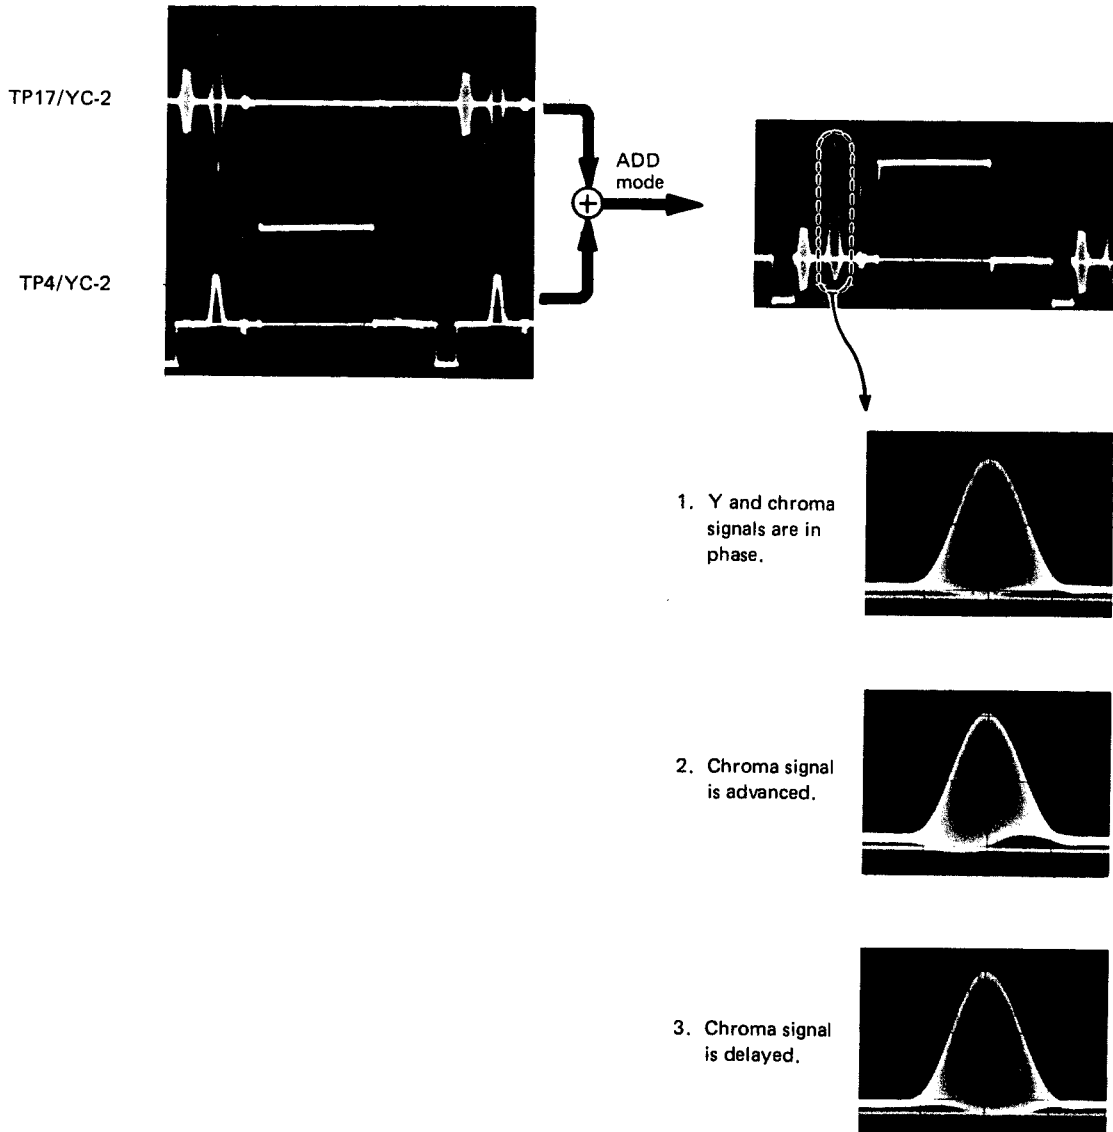

11-6-3. DUB Y/C Delay Time Adjustment

.Playing back the MOD.20T pulse segment of Alignment Tape RR5-2SC PAL.

Check point; TP8 and TP17/YC-3

Trig; TP9/YC-3

Spec;

Adj; DL2/YC-3

.Select the suitable tap according to short any taps of DL2/YC-3 board so that the waveform meets the photo 1.

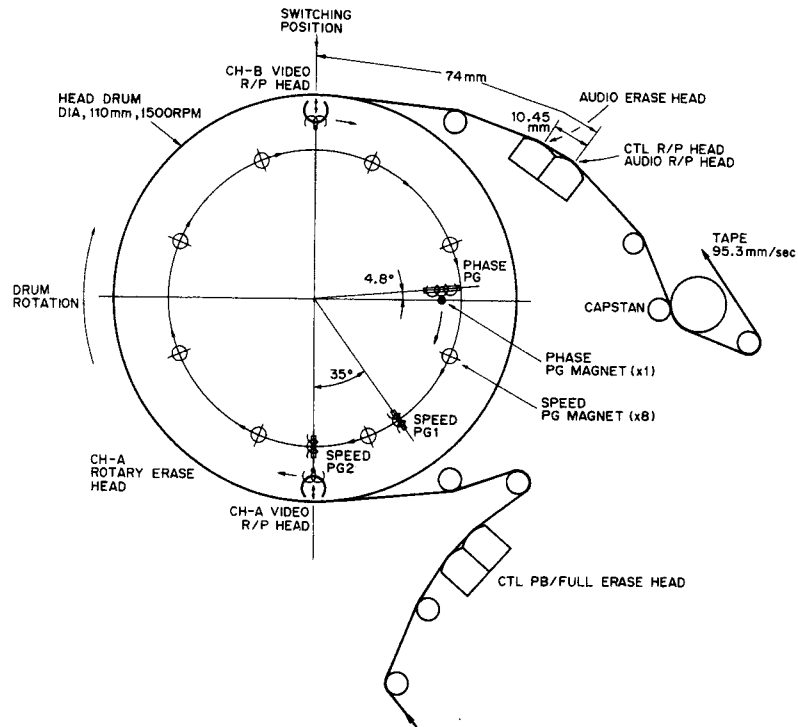

.Solder the printed foil pattern so that the chroma delay time is delayed 0.1 micro sec.

*Each one tap is 0.1 micro sec. delayed.

*The photo 3 shows that the chroma signal is delayed from the photo 1.

SECTION 14
SPARE PARTS AND FIXTURE

14-1. PARTS INFORMATION

1. Safety Related Component Warning
Components identified by shading marked with  on the schematic diagrams, exploded views and electrical spare parts list are critical to safe operation. Replace these components with Sony parts whose parts numbers appear as shown in this manual or in service bulletins and service manual supplements published by Sony.
2. Replacement Parts supplied from Sony Parts Center will sometimes have different shape and outside view from the parts which actually in use. This is due to "accommodating the improved parts and/or engineering changes" or "standardization of genuine parts."
- This manual's exploded views and electrical spare parts lists are indicating the parts numbers of "the standardized genuine parts at present".
 - Regarding engineering parts changes in our engineering department, refer Sony service bulletins and service manual supplements.
3. Printed Components in Bold-Face type on the exploded views and electrical spare parts list are normally stocked for replacement purposes. The remaining parts are not normally required for routine service work. Orders for parts not shown in Bold-Face type will be processed, but allow for additional delivery time.
4. Item with no part number and/or no description are not stocked because they are seldom required for routine service.
5. (T) after a spring description is shown on the exploded views in order to indicate the number of a spring turn required for the use.
(Example) Spring, tension (24T); This spring must be cut at its 24th turn for actual use.

14-2. EXPLODED VIEW

- Exploded views are composed of the following blocks.
 - (1) Reel Chassis (1)
 - Supply reel table
 - Supply tension regulator arm
 - Search solenoid
 - Skew solenoid
 - Supply main brake
 - Reel motor
 - (2) Reel Chassis (2)
 - Take-up reel table
 - FF/REW idler
 - Take-up main brake
 - Take-up tension regulator arm
 - R brake
 - Still/miss-rec. detector
 - (3) Reel Chassis (3)
 - Supply idler solenoid
 - Take-up idler solenoid
 - FF/REW idler pulley
 - Supply brake solenoid
 - Take-up brake solenoid
 - 10 times picture search solenoid
 - (4) Threading
 - Threading ring
 - Gear box
 - T correction guide
 - Tape beginning sensor
 - FR detector
 - (5) Threading Arm
 - T drawer arm
 - S drawer arm
 - Drawer lever
 - (6) Drum/Capstan
 - Head drum
 - Capstan motor
 - Audio/CTL head
 - Brush
 - (7) Erase Head Base
 - Erase head base
 - S guard
 - (8) Pinch Lever
 - Pinch lever
 - Pinch roller pre-set cam
 - Pinch solenoid
 - (9) Cassette-up Compartment
 - (10) Function Control
 - Function control panel (except ornamental panel)
 - (11) Chassis (1)
 - Chassis (bottom view)
 - (12) Chassis (2)
 - Chassis (rear view)
 - (13) Meter Panel
 - (14) Chassis (3)
 - Chassis (top view)
 - (15) Printed Circuit Board
 - Printed circuit board (except bottom block)
 - (16) Ornamental Panel (1)
 - Ornamental panel (except control panel)
 - (17) Ornamental Panel (2)
 - Control panel
 - (18) Switching Regulator (UR-01)

OTE:

- The shaded and **Δ**-marked components are critical to safety. Replace only with same components as specified.
- Parts printed in **Bold-Face type** are normally stocked for replacement purposes. The remaining parts shown in this manual are not normally required for routine service work. Orders for parts not shown in **Bold-Face type** will be processed, but allow for additional delivery time.
- Item with no part number and/or no description are not stocked because they are seldom required for routine service.

ORNAMENTAL PANEL (1)

ORNAMENTAL PANEL (1)

Ornamental Panel
